Summer Vacations training (four weeks):

S. No.	Course Code	Course Name	Scheme of Teaching			Scheme of Examination		
			L-T-P	Contact hrs/week	Credits	Theory		Practical*
						Internal Assessment	University Exam	
1.	IPD201	Innovative product design	0-0-20	20	0 + 2	-	-	50

Note: Students will undergo four week in-house training during summer vacations in their respective branches. They will be trained to handle laboratory and practical aspects in their field of engineering.

The marks and credits of Innovative product design (IPD201) will be added in the second semester mark-sheet.

* Practical marks are for continuous and end semester evaluation

Any one of the following three papers to be chosen by the institute

Paper Title: Oscillation and optics Paper Code: APH 101/ APH 201

Paper Title: Quantum and Statistical Physics Paper Code: APH 103/ APH 203

Paper Title: Physics of Materials Paper Code: APH 207/ APH 107

SEMESTER I

Course Code	MATHS101
Course Title	Calculus
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Course Prerequisites	
Course Objectives (CO)	<ol style="list-style-type: none">1. To understand the behaviour of infinite series and its use.2. To learn the concepts of functions of two and more than two variables and their applications.3. To learn the methods to evaluate multiple integrals and their applications to various problems.4. To understand the concepts of Vector calculus and their use in engineering problems.
Course Outcome	<ol style="list-style-type: none">1. The students are able to test the behaviour of infinite series.2. Ability to analyze functions of more than two variables and their applications.3. Ability to evaluate multiple integrals and apply them to practical problems.4. Ability to apply vector calculus to engineering problems

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

FUNCTIONS OF ONE VARIABLE

Sequences and Series: Sequences, Limits of sequences, Infinite series, series of positive terms, Integral test, Comparison test, Ratio test, Root test. Alternating series, Absolute and Conditional Convergence, Leibnitz test. Power series: radius of convergence of power series, Taylor's and Maclaurin's Series, Formulae for remainder term in Taylor and Maclaurin series, Error estimates. (Scope as in Chapter 11, Sections 11.1 – 11.9 of Reference 1).

Integral Calculus: Areas of curves, Length of curves, Volume (disk and washer method) and surface areas of revolution (Scope as in Chapter 5, Sections 5.6, Chapter 6, 6.1, 6.3, 6.5 of Reference 1).

(11 hours)

DIFFERENTIAL CALCULUS OF FUNCTIONS OF TWO AND THREE VARIABLES

Concept of limit and continuity of a function of two and three variables, Partial derivatives, total derivative, Euler's theorem for homogeneous functions, composite function, differentiation of an implicit function, chain rule, change of variables, Jacobian, Taylor's theorem, Errors and increments, Maxima and minima of a function of two and three variables, Lagrange's method of multipliers (Scope as in Chapter 14, Sections 14.1-14.4, 14.6-14.10 of Reference 1).

(10 hours)

SECTION-B

INTEGRAL CALCULUS OF FUNCTIONS OF TWO AND THREE VARIABLES

Double and triple integrals, Change of order of integration, Change of Variables, Applications to area, volume and surface area. (Scope as in Chapter 15 of Reference 1).

(9 hours)

VECTOR DIFFERENTIAL CALCULUS

Vector-valued functions and space curves, arc lengths, unit tangent vector, Curvature and torsion of a curve, Gradient of a Scalar field, Directional Derivative (Scope as in Chapter 13, Sections 13.1, 13.3-13.5 Chapter 14, Section 14.5 of Reference 1).

(8 hours)

VECTOR INTEGRAL CALCULUS

Line integrals, Vector fields, Work, Circulation and Flux, Path Independence, Potential functions and Conservative fields, Green's theorem in the plane, Surface Areas and Surface Integrals, Stoke's Theorem, Gauss Divergence Theorem (Statements only) (Scope as in Chapter 16 of Reference 1).

(7 hours)

RECOMMENDED BOOKS

S. No.	NAME	AUTHORS	PUBLISHER
1.	Calculus	Maurice D. Weir, Joel Hass, Frank R. Giordano, Thomas	11 th edition, Pearson Education.
2.	Advanced Engineering Mathematics	E. Kreyszig.	8th edition , John Wiley.
3.	Advanced Engineering Mathematics	Michael D. Greenberg	2 nd edition, Pearson Education.
4.	Advanced Engineering Mathematics	Wylie and Barrett	Tata McGraw Hill
5.	Higher Engineering Mathematics	B.V.Ramana	Tata McGraw Hill.
6.	Advanced Engineering Mathematics	R. K. Jain, S. R. K. Iyenger	Narosa Publications

Course Code	CS102
Course Title	Introduction to Computer Science and Engineering
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz)	50 50
Course Prerequisites	
Course Objectives (CO)	<ol style="list-style-type: none"> 1. To appraise students about various disciplines in Computer Science and Engineering. 2. To make students aware of emerging trends of Computer Science and Engineering.
Course Outcome	The student will have knowledge about various fields of Computer Science and Engineering.

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION – A

Introduction

What is computer science?, Differentiating computer science from engineering, Classification of computers, History, Types of Computers, Block Diagram of a Computer System, Introduction to various units, CPU, Memory, Input and Output devices, Auxiliary storage devices. Turing model, Von-Newmann model, social and ethical issues in computer science and engineering.

(8 hours)

Computer Hardware and Software

Introduction to computer hardware, components of mother boards & its types-ports, slots, connectors, add on cards, Basics of Number System. Application software, system software, interpreter, compilers, editor, computer viruses, worms, trojan.

(6 hours)

Computer Organization

Central processing unit, computer storage: memory hierarchy, basics of RAM ,ROM , PROM, EPROM, Floppy, CD Rom, CDRW, DVD, Virtual memory, Cache memory, Physical memory

(5 hours)

SECTION - B

Logic Development and Algorithm

Various techniques to solve a problem, Ways to specify an algorithm, Flow charts. (6 hours)

Area of Computer Science and Engineering

Theory of computation, algorithms and data structures, Database, Artificial Intelligence, Computer Networks, Software Engineering, Computer Vision, Web and Internet. (16 hours)

Trends in Computing

Social and ethical issues related to computing technology, Professional development opportunities. (4 hours)

TEXT BOOK			
S.No.	NAME	AUTHOR	PUBLISHER
1.	Computing Fundamentals	Peter Norton	Tata McGraw Hill
REFERENCE BOOK			
1.	Computer Science Handbook	Allen B. Tucker	CRC Press

Course Code	CS101 / CS201
Course Title	Programming Fundamentals
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	
Course Objectives (CO)	To get basic knowledge of computers, its components and Operating systems and Linux. Shell Commands.
Course Outcome	Upon successful completion of this course, the student should be able <ol style="list-style-type: none"> 1. To document, implement, test and debug C programs. 2. To program with Operators, Conditions Statements, Function, Pointers, Arrays, Structures, Files and Preprocessor directives 3. To understand concepts of object oriented programming and Shell programming.

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Introduction

Introduction to Programming Languages, Flowcharts, Algorithms, System Software (Assembler, Compiler, Translator, Debugger), Program Structure. (5 hours)

Basic Constructs of C

Keywords, Identifiers, Variables, Symbolic Constants, Data Types and their storage, Operands, Arithmetic Operators, Relational Operators, Logical Operators, Bitwise Operators, Increment & Decrement Operators, Expressions, Conditional Expressions, Assignment Operators and Expressions, Type Conversions, Precedence and Order of Evaluation, External Variables and Scope of Variables. Basic Input Output, Formatted I/O. (7 hours)

Program Control Flow

Statements and Blocks, Conditional Statements, IF, ELSE-IF, Switch Case statements, Control Loops, For, While and Do-While, Go to and Labels. (7 hours)

Arrays & Functions

Arrays, Multi dimensional arrays, strings, pointer arrays, Functions, Function Prototyping, Scope of functions, Arguments, Call by value and call by references, static variables, recursion. (7 hours)

SECTION - B

Structures

Structures, Array of Structures, Typedef, Unions, Bit fields, passing structures as an argument to functions, C-Pre-processor and Macros, Command line arguments. (6 hours)

Pointers

Pointer declaration, initialization, Pointer arithmetic, Pointer to array and Pointer to structure. (6 hours)

Input and Output

Standard and Formatted Input and Output, File Access & its types, Line Input and Output, Types of Files, Binary & ASCII Files, Error handling, stderr and exit functions. (7 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	The C Programming language	Brian Kernighan and Dennis M. Ritchie	Prentice Hall, 2 nd edition, 2007
2.	Fundamentals of Information Technology and Computer Programming	V. K. Jain	PHI. Latest edition
3.	C Programming: A Modern Approach	K. N. King	W. W. Norton Company 2 nd edition (2008)
4.	C : The Complete Reference	Herbert Schildt	Tata McGraw Hill Publications, 4 th edition
5.	Let us C++	Yashwant Kanetkar	BPB Publications
6.	Programming in ANSI C++	E. Balagurusamy	TMH publications, 4 th edition, Reprint(2008)
7.	Programming in ANSI C	Gottfried	Schaum Series, TMH publications, 2 nd edition(1996)

List of Experiments

Instruction for Students: The candidate will be attending a laboratory session of 2 hours weekly and students have to perform the practical related to the following list.

1. Introduction to basic structure of C program, utility of header and library files.
2. Implementation of program related to the basic constructs in C
3. Program using different data types in C
4. Programs using Loops and Conditional Statements in C

5. Programs using arrays single dimension and multi dimensions in C.
6. Implementation of Matrices and their basic functions such as addition, subtraction, multiplication, inverse.
7. Programs using functions by passing values using call by value and call by reference method
8. Programs related to structures and unions
9. Program to implement array using pointers
10. Programs related to string handling in C
11. Program to manage I/O files and Pointers

Physics Course 1

Any one of the following three papers to be chosen by institute

Course Code	APH 101 / APH 201
Course Title	Oscillations and Optics
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Ultrasonics

Production and detection of ultrasonics

(2 hours)

Simple Harmonic Motion

Review of SHM, superposition of two SHM in one dimension, charge oscillations in LC circuits

(3 hours)

Damped Oscillations

Concept and cause of damping, differential equation of a damped oscillator and different kinds of damping, Methods of describing damping of an oscillator - logarithmic decrement, relaxation time, quality factor, band width. Series LCR circuit as a damped oscillator.

(3 hours)

Forced Oscillations

States of forced oscillations, differential equation of forced oscillator – its displacement, velocity and impedance, behaviour of displacement and velocity with driver's frequency, Power, bandwidth, Quality factor and amplification of forced oscillator, resonance in forced oscillators, forced oscillations in series LCR circuit

(4 hours)

Wave Motion

Wave equation and its solution, characteristic impedance of a string, reflection and transmission of waves on a string at a boundary, reflection and transmission of energy, the matching of impedances
(3 hours)

SECTION - B

Interference

Division of wave front and amplitude; Fresnel's biprism, Newton's rings, Michelson interferometer and its applications for determination of λ and $d\lambda$.
(4 hours)

Diffraction

Fresnel and Fraunhofer diffraction, qualitative changes in diffraction pattern on moving from single slit to double slit, plane transmission grating, dispersive power & resolving power of a grating.
(5 hours)

Polarization

Methods of polarization, analysis of polarized light, quarter and half wave plates, double refraction.
(4 hours)

Lasers

Elementary idea of LASER production, spontaneous emission, stimulated emission, Einstein's coefficients, Helium-Neon, Ruby and semiconductor lasers, applications of lasers.
(4 hours)

Fibre Optics

Basics of optical fibre - its numerical aperture, coherent bundle, step index and graded index fibre, material dispersion, fibre Optics sensors, applications of optical fibre in communication systems.
(3 hours)

Holography

Basic principle, theory and requirements, applications
(2 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Physics for Engineers	N. K. Verma	Prentice Hall India
2.	Physics of Vibrations and Waves	H. J. Pain	5 th edition, John Wiley & Sons
3.	Vibrations and Waves	A. P. French	CBS Publishers
4.	Optics	Ajoy Ghatak	McGraw Hill Publications

LIST OF EXPERIMENTS

- To study Lissajous figures obtained by superposition of oscillations with different frequencies and phases.
- To find the wavelength of sodium light using Fresnel's biprism.
- To determine the wavelength of He-Ne laser using transmission grating.
- To determine the slit width using the diffraction pattern.
- To determine the wave length of sodium light by Newton's rings method.
- To determine the wave length of sodium light using a diffraction grating.
- To find the specific rotation of sugar solution using a Bi-quartz Polarimeter.
- To design a hollow prism and used it find the refractive index of a given liquid.
- To determine the wavelength of laser using Michelson interferometer.

Course Code	APH 103 / APH 203
Course Title	Quantum and Statistical Physics
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION – A

Special theory of Relativity

Inertial and non-inertial frames of reference, Galilean transformation, Michelson Morley Experiment, postulates of special theory of relativity, Lorentz transformation, Simultaneity, Length contraction, Time dilation, Doppler effect, Addition of velocities, variation of mass with velocity, mass-energy relation (7 hours)

Origin and Postulates of Quantum Mechanics

Quantum theory of light, X-rays production, spectrum & diffraction (Bragg's law), photoelectric effect, Compton effect, pair production, photons & gravity, black holes, de-Broglie hypothesis, particle diffraction, uncertainty principle and applications (7 hours)

Postulates of quantum mechanics, Schrodinger theory, time-dependent and time-independent Schrodinger equation, wave function, Born interpretation and normalization, expectation values (3 hours)

SECTION - B

Applications of Quantum Mechanics

Particle in a box (infinite potential well), finite potential step and barrier problems, tunneling, linear harmonic oscillator (one-dimensional) (4 hours)

Hydrogen atom (qualitative), radiative transitions and selection rules, Zeeman effect, Spin-orbit coupling, electron spin, Stern-Gerlach experiment, exclusion principle, symmetric and antisymmetric wavefunctions (5 hours)

Statistical Physics

Maxwell-Boltzmann statistics, molecular energies in an ideal gas, Bose-Einstein and Fermi-Dirac statistics, black body radiation, Rayleigh-Jeans and Planck's radiation laws, free electrons in a metal, electron-energy distribution, Fermi energy, electronic specific heat, conduction in metals, thermionic emission.
(10 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Concepts of Modern Physics	Arthur Beiser	McGraw Hill Publications
2.	Solid State Physics	C. Kittel	Wiley Eastern Publications
3.	Solid State Physics	S. O. Pillai	New Age International
4.	Statistical Physics Thermodynamics	V. S. Bhatia	

List Of Experiments

1. To study the quantized energy level of the first excited state in the Argon using the Frank-Hertz setup.
2. To find the value of Planck's constant and evaluate the work function of cathode material by used of photoelectric cell.
3. To study various characteristics of photo-voltaic cell: (a) Voltage-current characteristics, (b) loading characteristics, (c) power-resistance characteristics and (d) inverse square law behavior of the photo-current with distance of source of light from photo-voltaic cell
4. To study the response of a photo-resistor to varying intensity of light falling on it and deduce spectral sensitivity of its semiconductor material.
5. To study the Balmer Series of Mercury and Hydrogen spectrum using diffraction grating and calculate Rydberg constant.
6. To evaluate charge on an oil drop using Millikan's oil drop method.
7. To verify Rutherford's alpha scattering formula using a mechanical model.

Course Code	APH 107 / APH 207
Course Title	Physics of Materials
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Crystal structure

Bonding forces and energies, Primary and Secondary bonds, Space Lattices, Symmetries in a cubic lattice, Crystal Structures (cubic and hexagonal cells), Assignment of coordinates, directions and planes in crystals, Linear, Planar and Space densities in crystals, close packed morphology (Hexagonal and cubic close packing), single and polycrystalline structures, interstitial spaces (trigonal, tetrahedral and octahedral voids)

Structure of ceramics (NaCl, Zinc blende, silica and silicates, diamond crystal, Graphite, Fullerenes and carbon nanotubes), Structure of polymers, crystallinity of long chain polymers
Crystal Structure analysis, X-ray diffraction and Bragg's law, Powder method for study of X-ray diffraction pattern, Crystal Defects (Point, line, surface and volume imperfections)

(14 hours)

Diffusion

Diffusion mechanisms, steady state diffusion, non-steady state diffusion, factors affecting diffusion, applications based on diffusion (corrosion resistance of Duralumin, carburization of steel, decarburization of steel, doping of semiconductors)

(3 hours)

Elastic, Anelastic and Viscoelastic Behaviour

Elastic behaviour and its atomic model, rubber like elasticity, anelastic behaviour, relaxation processes, viscoelastic behaviour, spring-dashpot model

(3 hours)

SECTION – B

Plastic Deformations and strengthening mechanisms

Tensile properties (Yield strength, Tensile Strength, Ductility, Resilience, Toughness), Dislocations and plastic deformation, characteristics of dislocations, slip systems, slip in single crystals, plastic deformation of polycrystalline materials, mechanisms of strengthening in metals (grain size reduction, solid-solution strengthening, strain hardening), recovery, recrystallization and grain growth
(5 hours)

Fracture, Fatigue and Creep

Fracture (Ductile and brittle fractures), principles of fracture mechanics, fracture toughness, ductile to brittle transitions Cyclic stresses, S-N curve, crack initiation and propagation, factors that affect fatigue life, environmental effects, generalized creep behavior, stress and temperature effects.
(5 hours)

Phase Diagrams

One-Component (or Unary) Phase Diagrams, Binary Isomorphous Systems, Interpretation of Phase Diagrams, Development of Microstructure in Isomorphous Alloys, Mechanical Properties of Isomorphous Alloys, Binary Eutectic Systems, Development of Microstructure in Eutectic Alloy, Equilibrium Diagrams Having Intermediate Phases or Compounds, Eutectic and Peritectic Reactions, The Gibbs Phase -Rule
(6 hours)

Phase Transformations

Kinetics of phase transformation, kinetics of solid state reactions, Isothermal transformation diagrams, continuous cooling transformation, temper embrittlement
(4 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Material science and engineering – An Introduction	William D Callister	6 Th edition, John Willey and Sons.
2.	Material Science and Engineering – A First Course	V. Raghvan	4 th edition, Eastern economy edition
3.	Solid State Physics	S. O. Pillai	New Age International
4.	Introduction to Solids	Leonid V Azaroff	Tata McGraw Hill, 3 rd edition.

List of Experiments

1. To find the energy band gap of the given semiconductor by four probe method.
2. To study the Hall Effect of a given semiconductor.
3. To determine the dielectric constant of the given materials.
4. To study the B-H curve of the ferromagnetic materials.
5. To determine the value of e/m for electron by long solenoid (helical) method.
6. To study the variation of magnetic field with distance along the axis of a circular coil carrying current by plotting a graph.
7. To find the Curie temperature of a Ferroelectric material by measuring Capacitance as a function of temperature.
8. To determine the thermal conductivity of an insulator material using guarded plate method (Lee's disc method).
9. To study (a) Voltage-current characteristics (b) loading characteristics (c) Power-Resistance characteristics and (d) intensity response of photo-voltaic cell.

Course Code	HSS 101 / HSS 201
Course Title	Ethics and Self Awareness
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Course Prerequisites	
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Introduction to Ethics

Concept of Ethics – Nature, Scope, Sources, Types, Functions and Factors influencing Ethics, Approaches to Ethics – Psychological, Philosophical and Social, Broader Ethical Issues in Society.
(6 hours)

Values, Norms, Standards and Morality

Concept and Role, Relation with Ethics, Psycho-Social Theories of Moral Development – Kohlberg and Carol Gilligan
(4 hours)

Ethics and Business

Concept of Business Ethics – Nature, Objectives and Factors influencing Business Ethics, 3 C's of Business Ethics, Ethics in Business Activities, Ethical Dilemmas in Business, Managing Ethics
(5 hours)

SECTION – B

Self-Awareness

Concept of Self Awareness – Need, Elements, Self Assessment – SWOT Analysis, Self Concepts – Self-Knowledge, Assertiveness and Self-Confidence, Self-Esteem
(4 hours)

Self-Development

Concept of Self-Development, Social Intelligence, Emotional Intelligence, Managing Time and Stress, Positive Human Qualities (Self-Efficacy, Empathy, Gratitude, Compassion, Forgiveness and Motivation), Personality Development Models – Johari Window, Transactional Analysis, Myers Briggs Type Indicator, Self-Awareness and Self-Development Exercises
(11 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Business Ethics – Text and Cases	C.S.V. Murthy	Himalaya Publishing House
2.	Business Ethics	Hartman, Laura P. And Chatterjee, Abha	Tata McGraw Hill
3.	Business Ethics and Professional Values	A. B. Rao	Excel Books
4.	Business Ethics – Concepts and cases	Manuel G. Velasquez	Prentice Hall
5.	Issues and Ethics in the Helping Professions	G. Corey, M. Schneider Corey, P. Callanan	Brooks/Cole
6.	Theories of Personality	S. Calvin Hall, Dardner Lindzey and John B. Cambell	Hamilton Printing Company
7.	The Curse of Self-awareness, Egotism and the Quality of Human Life	M. R. Leary	Oxford University Press
8.	Self – Awareness	Allan Twain	

Course Code	GS 101 / GS 201
Course Title	Introduction to Environment Science
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Course Prerequisites	
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

General

Introduction, components of the environment, environmental degradation. (4 hours)

Ecology

Elements of ecology: Ecological balance and consequences of change, principles of environmental impact assessment. (4 hours)

Air pollution and control

Atmospheric composition, energy balance, climate, weather, dispersion, sources and effects of pollutants, primary and secondary pollutants, green house effect, depletion of ozone layer, standards and control measures. (6 hours)

PART B

Water pollution and control

Hydrosphere, natural water, pollutants their origin and effects, river/lake/ground water pollution, standards and control. (6 hours)

Land Pollution

Lithosphere, pollutants (municipal, industrial, commercial, agricultural, hazardous solid wastes): their origin and effects, collection and disposal of solid waste, recovery and conversion methods. (6 hours)

Noise Pollution

Sources, effects, standards and control. (6 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Introduction to Environmental Engineering and Science	C. M. Masters	Prentice Hall of India Pvt. Ltd., 1991
2.	Environmental Science	B. J. Nebel	Prentice Hall Inc., 1987

SEMESTER II

Course Code	MATHS201
Course Title	Differential Equations and Transforms
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz)	50 50
Course Prerequisites	Calculus (MATHS101)
Course Objectives (CO)	<ol style="list-style-type: none">1.To learn the methods to formulate and solve linear differential equations and their applications to engineering problems2.To learn the concepts of Laplace transforms and to evaluate Laplace transforms and inverse Laplace transform3.To apply Laplace transforms to solve ordinary differential equations4.To learn the concept of Fourier series, integrals and transforms.5.To learn how to solve heat, wave and Laplace equations.
Course Outcome	<ol style="list-style-type: none">1. The student will learn to solve Ordinary Differential equations.2. The students will be able to apply the tools of Laplace Transforms to model engineering problems and solve the resulting differential equations.3. Students will understand the nature and behavior of trigonometric (Fourier) series and apply it to solve boundary value problems.

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION – A

ORDINARY DIFFERENTIAL EQUATIONS

Review of geometrical meaning of the differential equation, directional fields, exact differential equations(scope as in chapter 8, sections 8.1 – 8.10 of reference 2), solution of differential equations with constant coefficients; methods of differential operators (scope as in chapter 9, sections 9.1 – 9.5 of reference 2). Non-homogeneous equations of second order with constant coefficients: Solution by method of variation of parameters, reduction by order (scope as in chapter 9, section 9.7, 9.10 of reference 2). Power series method of solution(scope as in chapter 10, section 10.2 of reference 2)

(13 hours)

Laplace Transforms

Laplace transform, Inverse transforms, shifting, transform of derivatives and integrals. Unit step function, second shifting theorem, Dirac's Delta function. Differentiation and integration of transforms. Convolution Theorem on Laplace Transforms. Application of Laplace transforms to solve ordinary differential equations with initial conditions (Scope as in Chapter 5, Sections 5.1 – 5.5 of Reference 1).

(10 hours)

SECTION – B

Fourier Series and Transforms: Periodic functions, Fourier series, Even and odd series, half range expansions, Complex Fourier Series, Approximation by trigonometric polynomials. Fourier integrals, Fourier Cosine and Sine transforms, Fourier Transforms (Scope as in Chapter 10, Sections 10.1 – 10.5, 10.7 – 10.10 of Reference 1).

(8 hours)

Partial Differential Equations: Partial differential equations of first order, origin, solution of linear partial differential equations of first order, Integral surfaces passing through a given curve (Scope as in Chapter 2, Sections 1, 2, 4, 5 of Reference 4).

(6 hours)

Boundary Value Problems: D'Alembert's solution of wave equation, separation of variables: one dimension and two dimension heat and wave equation, Laplace equation in Cartesian and Polar coordinates (Scope as in Chapter 11, Sections 11.1, 11.3 – 11.5, 11.8 – 11.9 of Reference 1).

(8 hours)

RECOMMENDED BOOKS

S.No.	NAME	AUTHORS	PUBLISHER
1.	Elements of Partial Differential Equations	Ian N. Sneedon	McGraw Hill, Singapore 1957.
2.	Advanced Engineering Mathematics	E. Kreyszig.	8th edition , John Wiley.
3.	Advanced Engineering Mathematics	Michael D. Greenberg	2 nd edition, Pearson Education.

4.	Advanced Engineering Mathematics	Wylie and Barrett	Tata McGraw Hill
5.	Higher Engineering Mathematics	B.V.Ramana	Tata McGraw Hill.
6.	Advanced Engineering Mathematics	R. K. Jain, S. R. K. Iyenger	Narosa Publications
7.	Theory and problems of Differential Equations	Frank Ayers	Shuam outline series, McGraw-Hill, Singapore, 1957

Course Code	HSS202/ HSS102
Course Title	Communication Skills
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Course Prerequisites	
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Fundamentals of Communication Skills

Scope and Significance of Communication Skills, Listening, Speaking, Reading and Writing
(2 hours)

Writing Skills

Basics of Grammar – Word Order, Sentence Construction, Placing of Subject and Verbs, Parts of Speech, Use of Tenses, Articles, Prepositions, Phrasal Verbs, Active-Passive, Narration
(4 hours)

Vocabulary Building and Writing

Word Formations, Synonyms, Antonyms, Homonyms, One-Word Substitutes, Idioms and Phrases, Abbreviations of Scientific and Technical Words.
(3 hours)

Speaking Skills

Introduction to Phonetic Sounds, English Phonemes, Stress, Rhythm and Intonation, Countering Stage Fright and Barriers of Communication.
(3 hours)

Reading and Comprehension

(2 hours)

Section – B

Advanced Communication Skills

Scope, Significance, Process of Communication in an organization, Types and Levels, Communication Networks, Technical Communication, Tools of Effective Communication.

(2 hours)

Speaking Skills and Personality Development

Interpersonal Communication, Presentation Skills, Body Language and Voice Modulation, Persuasion, Negotiation and Linguistic Programming, Public Speaking, Group Discussions, Interviews and Case Studies, Power Point Presentations , Relevant to the context and locale, Technical Presentations, Conducting , Meeting and Conferences (5 hours)

Communication and Media

Social and Political Context of Communication, Recent Developments in Media (1 hour)

Advanced Techniques in Speaking Skills

Importance of Listening/Responding to native and global accents, Telephonic Interviews and Video Conferencing (2 hours)

Advanced Techniques in Technical Writing

Job Application, CV Writing, Business Letters, Memos, Minutes, Reports and Report Writing Strategies, E-mail Etiquette, Blog Writing, Instruction Manuals and Technical Proposals (4 hours)

Practical Sessions

1. Individual presentations with stress on delivery and content
2. Overcoming Stage Fright - Debates, extempore
3. How to discuss in a group - Group Discussion
4. Discussion on recent developments and current debates in the media
5. How to prepare for an Interview and face it with confidence
6. Conducting meeting and conferences
7. Exercises on Composition & Comprehension, Reading Improvement

TEXT BOOKS

10	Student Activities for taking charge of your carrer direction and Job Search	R. Locke	Core Publishing
11	Body Language	A. Pease	Sheldon Press
12	Technical Communication: Principles and Practice	Minakshi Raman and S. Sharma	Oxford university Press

Course Code	CH101 / CH201
Course Title	Applied Chemistry
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz) Practical (Continuous and end semester evaluation)	50 50 50
Course Prerequisites	10+2
Course Objectives (CO)	To teach the fundamentals of basic chemical sciences essential for the development of new technologies to all branches of engineering.
Course Outcome	1) Thermodynamics will help the students learn different thermodynamic laws, heat changes and energy calculations. 2) Studying catalysis will be beneficial to understand the role and mechanism of various heterogeneous and homogeneous catalysts in increasing reactions rate of many synthetically important chemical reactions. 3) By studying corrosion, the students will learn about basic nature and reasons of corrosion, its impact in many sectors of our lives. 4) Studying spectroscopy will help to understand the basic principles of spectroscopy and its use to determine chemical structures. 5) By studying coordination chemistry and CFT, explanation about different properties of coordination compounds will be given.

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Thermodynamics: Review of objectives and limitations of chemical thermodynamics, State

functions, Thermodynamic equilibrium, work, heat, internal energy, enthalpy, heat capacity, Zeroth law of thermodynamics, First law of thermodynamics, Reversible, isothermal and adiabatic expansion & compression of an ideal gas. Irreversible isothermal and adiabatic expansion of an ideal gas. Carnot cycle and efficiency of reversible engines, Enthalpy change and its measurement. Flame temperature, Second and third law of thermodynamics. Concept of entropy. Gibb's and Helmholtz equations. Simple numerical for calculating w , q , ΔE , ΔH and entropy.

(10 hours)

Catalysis: Catalysis and general characteristics of a catalytic reactions, homogeneous catalysis, kinetics of acid, base and enzyme catalysis – Michealis Menten equations. Heterogenous catalysis. Application of catalysis for industrially important processes– hydrogenation (Wilkinson's catalyst), hydroformylation, acetic acid process and Wacker process.

(6 hours)

Electrochemistry: Introduction to electrochemistry, types of electrodes, Ion selective electrodes, Reference electrodes, Fuel cells (hydrogen-oxygen, propane-oxygen, methanol-oxygen fuel cells), Corrosion: Types of corrosion, dry and wet corrosion and their mechanisms, types of electrochemical corrosion (galvanic, pitting, waterline, differential aeration, soil, microbiological, inter-granular, stress corrosion), Factors influencing corrosion, Prevention of corrosion.

(8 hours)

SECTION - B

Polymer chemistry: Classification of polymers, Mechanism and methods of polymerisation, idea of number average and weight average molecular masses of polymers, preparation, properties and uses of polystyrene, polyester, polyamide, phenol-formaldehyde, silicones and epoxy resins.

(5hours)

Spectroscopy: UV- Introduction, Lambert-Beer's Law, selection rules, electronic transitions, Application to simple organic molecules (auxochrome, chromophore), effect of conjugation and solvent on transition of organic molecules, Woodward-Fieser Rules for calculating λ_{max} for dienes. IR- Introduction, Principle of IR spectroscopy-Fundamental vibrations, Application to simple organic molecules (effect of masses of atoms, bond strength, nature of substituent, hydrogen bonding on IR frequency), sample preparation for IR.

(10 hours)

Coordination chemistry: Introduction, Crystal Field Theory, Splitting of octahedral, tetrahedral and square planar complexes, crystal field stabilization energies of octahedral and tetrahedral complexes and its applications.

(6 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Organic Chemistry	Joseph M. Hornback Brooke	Cole Publishing Company U.S.A.
2.	Atkin's Physical Chemistry	Peter Atkins, Julio de Paula	7 th Edition, Oxford University Press.
3.	Concise Inorganic Chemistry	J D Lee	Vth Edition, Chapman & Hall, 2003
4.	A Textbook of Engineering Chemistry	Shashi Chawla	Dhanpat Rai & Co. Pvt. Ltd
5.	Introductory Polymer Chemistry	G.S.Mishra	John Wiley & Sons, New York, 1993.
6.	Principles of Physical Chemistry	Puri, Sharma and Pathania	W.H. Freeman & Co, 2008.
7.	Introduction to spectroscopy	D. S. Pavia, G.M. Lasmpman and G.S. Kriz	4 th Edition, Thomson learning, Indian Edition 208.
8	Basic Inorganic Chemistry	F.A. Cotton, G. Wilkinson and P.L. Gaus	3rd Ed., John Wiley & Sons.

List of Experiments

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly and has to perform any eight experiments.

1. Volumetric analysis: Iodometric titrations, complexometric titrations, Acid-base titrations (conductometric), Precipitation titrations
2. Analysis of lubricants: Viscosity/surface tension/saponification value/acid value
3. Instrumental techniques for chemical analysis: Conductometry, potentiometry, UV-visible/IR spectrophotometer.
4. Preparation of few organic compounds/inorganic complexes/polymer.

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	A textbook of Quantitative Inorganic Analysis	A. I. Vogel	Longman Gp. Ltd, 4 th editon
2	Essentials of Experimental Engineering Chemistry	Shashi Chawla	Dhanpat Rai and Co. Delhi (2001)
3	Vogel's text book of quantitative chemical analysis	J. Mendham, R. C. Denny, J. D. Barnes and M. J. K. Thomas	Pearson Education

Course Code	ME 203 / ME103
Course Title	Workshop Practice
Type of Course	Core
Course Assessment Methods Practical (Continuous and end semester evaluation)	50
Course Prerequisites	Basic Workshop Practices
Course Objectives (CO)	<ol style="list-style-type: none"> 1. Know different machines, tools and equipment, Identify different Engineering materials, metals and non-metals. 2. Understand different Mechanisms, Use of Machines, Tools and Equipment. 3. Knowledge of basic Manufacturing Processes in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal, Smithy, Foundry and Carpentry Workshops.
Course Outcome	<ol style="list-style-type: none"> 1. Familiarity with common machines, Tools and Equipment in basic Workshop Practices. 2. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal, Smithy, Foundry and Carpentry Workshops in Engineering professions. 3. Applications of Basic Workshop Practices..

SYLLABUS

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly. Practice of basic exercises related with different shops. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal, Smithy, Foundry and Carpentry Workshops in Engineering professions.

Welding Workshop :

(Theory)Joining Processes, Welding and its Classification, Welding Processes, Fusion Welding, Pressure Welding, Electric Arc Welding, Gas Welding, Resistance Welding, Metal Inert gas Welding, Welding Joints, Welding Positions, Welding defects, Welding Applications, Basic welding design and Procedures, identification of materials,

Jobs: Butt Joint in Flat Position using SMAW, Lap Joint using Spot Welding, Edge Joint in Horizontal Position using SMAW, Tee Joint in Flat position using SMAW, Corner Joint in vertical position using SMAW.

Defect Identification and marking, Edge preparation and Fillet making, Tacking, Distortion identification.

Electronics Workshop

To know about Soldering mechanism and techniques, Familiarity with Electronic Components / symbols, Testing of electronic components, Application of Soldering : Circuit Assembly

List of Jobs :

Practice of Soldering and de-soldering, Identification and testing of a) passive electronic components
b) Active electronic components, Assembly of Regulated Power supply circuit.

Electrical Workshop

Introduction of Various Electric wirings, Wiring Systems, Electrical wiring material and fitting, different type of cables, Conduit pipe and its fitting, inspection points, switches of all types, Distribution boards, M.C.B's etc., Electric Shock and its management.

Electric Tools: Conversance with various tools and to carry out the following:

1. Measurement of wire sizes using SWG and micrometer
2. Identification of Phase and neutral in single phase supply

Jobs:

To control a lamp with a single way switch

To control a lamp from two different places

To assemble a fluorescent lamp with its accessories

To control a lamp, fan and a three pin socket in parallel connection with single way switches

Fitting Shop

Introduction of Fitting, different type of operations, Tools, materials, precision instruments like Vernier caliper and Micrometer etc, Safety precautions and Practical demonstration of tools and equipments

Jobs:

To make a square from MS Flat, Punching, Cutting, Filling techniques and practice, Tapping, Counter Drilling.

Smithy Workshop

Introduction of Smithy and Forging process, Tools and Equipment's, Operations, Heat Treatment processes, Advantages, Dis-advantages, Defects and Safety precautions.

Jobs:

Drawing and Upsetting Practice using Open Hearth Furnace, Cold working process practice, Heat Treatment \: Annealing and hardening process

Machine Shop

Application, Function and different parts, Operations of Lathe, Type of Cutting Tools and their materials, Drill machine Types, applications and Functions. Hacksaw machines and functions, Work Holding devices and tools, chucks, Vices, machine Vices, V Block, Measuring Instruments uses, Shaper and Milling machine Applications.

Jobs:

To perform Marking, Facing, Turning, taper Turning, Grooving, Knurling, parting, Drilling, Reaming operations on lathe machine, Hacksawing practice on Power hacksaw, Shaping operation practice on Shaper.

Carpentry Shop

Classification of Tree, Timber. Advantages and uses of Timber, Seasoning of Wood, Tools Used, Defects and Prevention of Wood,

Jobs:

Tee Joint, Cross Joint, Tenon Joint, L Shape Joint, Practice of Wood Working Lathe, Practice on multi-purpose Planer.

Foundry Shop

Introduction to Foundry, Advantages and Disadvantages of castings process, Introduction to pattern and various hand tools, Ingredients of Green sands, Various Hand Molding processes, Introduction to Casting Defects.

Jobs:

Identification and uses of hand tools, Preparation of Green sand in Muller, Preparation of Sand Mould of Single piece solid pattern, Split pattern, Preparation of Green sand Core, casting of a Mould and study its defects.

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Introduction to Basic Manufacturing Processes and Workshop Technology	Rajender Singh	New Age International Publication
2	Manufacturing Processes	Chapman	Viva Books Private Limited

Course Code	CS203
Course Title	Digital Electronics and Logic Design
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	
Course Objectives (CO)	The objective of this course is to provide knowledge about digital electronics circuitry.
Course Outcome	

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

Section - A

Module 1

IC Digital Logic Families -Characteristics of digital IC.s, Transistor – Transistor Logic family, Standard TTL characteristics, Other TTL series, Open collector TTL, Wired OR/AND connection, Tristate TTL, Emitter-Coupled Logic family, ECL NOR/OR gate and its characteristics, Metal-oxide semi-conductor (MOS) family, NMOS and CMOS gates and their characteristics, CMOS transmission gate circuits .
(7 hours)

Module 2

Simplification of Boolean Functions -Using Karnaugh map and Quine-Mccluskey methods, SOP, POS simplification, NAND and NOR implementations, other two-level implementation (AND-OR-INVERT).
(6 hours)

Module 3

Combinational Logic Design-Design procedure, Adder : Half adder, Full adder, Serial adder, Parallel adder & Carry look-ahead adder, Subtractors : Half subtractor & Full subtractor, BCD to Excess-3 code convertor, BCD to 7-segment decoder, Parity generator and checker / .
(7 hours)

Section - B

Module 4

Combinational Logic Design using MSI Circuits -Application of typical IC.s like 4-bit parallel adder (ex : 7483), Encoders (ex :74148), Multiplexers (ex: 74151, 74153, 74157) and their use in realising boolean functions, Multiplexer trees, Demultiplexer / Decoders (e.g.: 74138, 74154) and their use in realising a boolean function and demultiplexer trees, 4-it magnitude comparator (ex:7485).
(7 hours)

Module 5

Synchronous Sequential Logic-Analysis of clocked sequential logic, State reduction and assignment, Flip-flop excitation tables, Design procedure, Design of sequential circuits ex : 3-bit up/down counter (mod < 8), 3-bit up/down gray code counter, Serial adder. (5 hours)

Module 6

Counters-Dependency notation, Symbols for Decoder, Multiplexer, Flipflops, Registers, Counters, RAM. Flipflops, Asynchronous counters (mod 8 and less than 8), IC asynchronous counters (7493, 7490) and cascading, synchronous counters, binary and binary up-down counters, IC synchronous counters (74192, 74190) and cascading. (6 hours)

Module 7

Registers-Registers and their different modes of operation SISO, SIPO, PISO, PIPO, Shift registers (7495 / 74195), bidirectional universal shift register (74194), Applications of shift registers, Time delay, Ring counter, Johnson counter, Sequence generator; Programmable Logic Devices-PLD, PLA, PAL, FPGA structures & applications. (7 hours)

TEXT BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Digital Design	M Morris Mano	3 rd edition, 2006, PHI
2	Modern Digital Electronics	R. P. Jain	2 nd edition, TMH
3	Digital Electronics	Bignell & Donovan Digital Electronics	4 th edition, 2007, Thomson Learning
Reference Books			
1.	Digital Systems	Tocci	PHI, 6e, 2001
2.	Digital Systems Design	Uyemeru	2003, Thomson Learning
3.	Digital Integrated Electronics	Anand Kumar	2ed 2009

List of Experiments

1. To study truth tables of AND, OR, NOR, NAND, NOT and XOR Gates.
2. To verify the truth tables of RS, of JK and T Flip Flops.
3. To fabricate and test the truth table of half and full adder.
4. To design and implement a Modulo-N Counter.
5. To design and implement a Universal shift register.
6. Design and fabrication of synchronous counter
7. Design and fabrication of combinational circuits using Multiplexers
8. To convert 8 bit Digital data to Analog value using DAC.
9. To convert Analog value into 8 bit Digital data using ADC

Course Code	CS202
Course Title	Object Oriented Programming
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	Programming Fundamentals (CS101/201)
Course Objectives (CO)	To understand the basic concepts of object oriented programming languages and to learn the techniques of software development in C++.
Course Outcome	

SYLLABUS

Note for the Examiner: The Semester question paper of a subject will be of 50 marks having 7 questions of equal marks. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt at least two questions from each part.

SECTION - A

Principles of Objective Oriented Programming (2 hours)

Tokens, Expressions and control structures, various data types, and data structures, Variable declaration, Operators and scope of operators. (4 hours)

Pointers, Functions, Classes and Objects: Prototyping, referencing the variables in functions, memory allocation for classes and objects, Array of objects, pointers to member functions. (8 hours)

Constructors and Destructors, Operator Overloading and type conversion. (4 hours)

Inheritance: Derived classes, types of inheritance, and various types of classes. (5 hours)

SECTION - B

Virtual functions and Polymorphism. (5 hours)

I/O operations on files: Classes for files, Operations on a file, file pointers. (8 hours)

Exception Handling and Generic programming with templates: Introduction to templates, overloading of template functions and Inheritance. Introduction to standard Template Library (9 hours)

TEXT BOOKS

S.No.	NAME	AUTHORS	PUBLISHER
-------	------	---------	-----------

1.	Turbo C++	Robert and Lafore	Galgotia Publications
Reference Books			
1	C++ Primer Plus	Stephan & PRAT	Galgotia Publications
2	Object oriented programming with C++	Bala Guruswamy	Tata McGraw Hill
3	Object oriented Programming with ANSI and Turbo C++	Ashok N. Kamthane	Pearson Education

List of Experiments

Note: Practical should be covered based on the following directions:

1. Functions, Classes and Objects
2. Constructors and Destructors
3. Operator Overloading and Type Conversion
4. Inheritance and Virtual Functions
5. Files
6. Exception Handling and Generic Programming

						Internal Assessment	University Exam	
1.	IPD201	Innovative product design	0-0-20	20	0+2	Nil	Nil	50

Note: Students will undergo four week in-house training during summer vacations in their respective branches. They will be trained to handle laboratory and practical aspects in their field of engineering.

The marks and credits of Innovative product design (IPD201) will be added in the second semester mark-sheet.

* Practical marks are for continuous and end semester evaluation

Any one of the following three papers to be chosen by the institute

Paper Title: Oscillation and optics Paper Code: APH 101/ APH 201

Paper Title: Quantum and Statistical Physics Paper Code: APH 103/ APH 203

Paper Title: Physics of Materials Paper Code: APH 207/ APH 107

FIRST SEMESTER

Course Code	MATHS101
Course Title	Calculus
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz)	50 50
Course Prerequisites	
Course Objectives (CO)	<ol style="list-style-type: none">1. To understand the behaviour of infinite series and its use.2. To learn the concepts of functions of two and more than two variables and their applications.3. To learn the methods to evaluate multiple integrals and their applications to various problems.4. To understand the concepts of Vector calculus and their use in engineering problems.
Course Outcome	<ol style="list-style-type: none">1. The students are able to test the behaviour of infinite series.2. Ability to analyze functions of more than two variables and their applications.3. Ability to evaluate multiple integrals and apply them to practical problems.4. Ability to apply vector calculus to engineering problems

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

FUNCTIONS OF ONE VARIABLE

Sequences and Series: Sequences, Limits of sequences, Infinite series, series of positive terms, Integral test, Comparison test, Ratio test, Root test. Alternating series, Absolute and Conditional Convergence, Leibnitz test. Power series: radius of convergence of power series, Taylor's and Maclaurin's Series, Formulae for remainder term in Taylor and Maclaurin series, Error estimates. (Scope as in Chapter 11, Sections 11.1 – 11.9 of Reference 1).

Integral Calculus: Areas of curves, Length of curves, Volume (disk and washer method) and surface areas of revolution (Scope as in Chapter 5, Sections 5.6, Chapter 6, 6.1, 6.3, 6.5 of Reference 1).

(11 hours)

DIFFERENTIAL CALCULUS OF FUNCTIONS OF TWO AND THREE VARIABLES

Concept of limit and continuity of a function of two and three variables, Partial derivatives, total derivative, Euler's theorem for homogeneous functions, composite function, differentiation of an implicit function, chain rule, change of variables, Jacobian, Taylor's theorem, Errors and increments, Maxima and minima of a function of two and three variables, Lagrange's method of multipliers (Scope as in Chapter 14, Sections 14.1-14.4, 14.6-14.10 of Reference 1).

(10 hours)

SECTION-B**INTEGRAL CALCULUS OF FUNCTIONS OF TWO AND THREE VARIABLES**

Double and triple integrals, Change of order of integration, Change of Variables, Applications to area, volume and surface area. (Scope as in Chapter 15 of Reference 1).

(9 hours)

VECTOR DIFFERENTIAL CALCULUS

Vector-valued functions and space curves, arc lengths, unit tangent vector, Curvature and torsion of a curve, Gradient of a Scalar field, Directional Derivative (Scope as in Chapter 13, Sections 13.1, 13.3-13.5 Chapter 14, Section 14.5 of Reference 1).

(8 hours)

VECTOR INTEGRAL CALCULUS

Line integrals, Vector fields, Work, Circulation and Flux, Path Independence, Potential functions and Conservative fields, Green's theorem in the plane, Surface Areas and Surface Integrals, Stoke's Theorem, Gauss Divergence Theorem (Statements only) (Scope as in Chapter 16 of Reference 1).

(7 hours)

RECOMMENDED BOOKS

S. No.	NAME	AUTHORS	PUBLISHER
1.	Calculus	Maurice D. Weir, Joel Hass, Frank R. Giordano, Thomas	11 th edition, Pearson Education.
2.	Advanced Engineering Mathematics	E. Kreyszig.	8th edition , John Wiley.
3.	Advanced Engineering Mathematics	Michael D. Greenberg	2 nd edition, Pearson Education.
4.	Advanced Engineering Mathematics	Wylie and Barrett	Tata McGraw Hill
5.	Higher Engineering Mathematics	B.V.Ramana	Tata McGraw Hill.
6.	Advanced Engineering Mathematics	R. K. Jain, S. R. K. Iyenger	Narosa Publications

Course Code	EC102 / EC202
Course Title	Introduction to Electronics
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	10+2
Course Objectives (CO)	<ol style="list-style-type: none"> 1. To introduce the field of electronics along with the applications. 2. To understand the fundamental concepts of basic semiconductor devices and digital electronics. 3. To become familiar with basic principle of operational amplifier along with its applications. 4. To make students familiar with the basic concept of Communication System.
Course Outcome	

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

Introduction to Electronics: Evolution of Electronic Devices and Integrated Circuit, Applications of electronics, Need and application of electronics in different areas (4 hours)

Semiconductor Devices: Concept of active and passive devices, Intrinsic and Extrinsic Semiconductors, conductivity of semiconductors and its temperature dependence, Semiconductor Devices: Structure, principle of operation, characteristics and applications of PN-Junction (Rectifier, Clipper and Clamper), BJT, Current Components in BJT, Input & Output characteristics BJT configurations. (12 hours)

Digital Electronics I: Number System and conversion, Binary arithmetic, basic and universal logic gates, minimization of Boolean expression using Boolean Algebra and K-map. (4hours)

SECTION-B

Digital Electronics II: Concept of flip-flops, RS, D, JK and T types, basic operation of counters and registers, Introduction to RAM & ROM, Basic principle and characteristics of Analog to Digital Converters (ADCs) and Digital to Analog Converters (DACs). (8 hours)

Operational Amplifier and its applications: Block diagram, characteristics, inverting and non-inverting configurations, Op-amp as summing amplifier, difference amplifier, integrator and differentiator. (8 hours)

Communication Systems: Various frequency bands used for communication, Block diagram of Analog and Digital communication, need of modulation, comparison of Analog and Digital communication systems. (6 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Integrated Electronics	Millman & Halkias	Mc-Graw Hill
2.	Electronics Devices & Circuit Theory	RL Boylestead & L Nashelsky	PHI
3.	Modern Digital Electronics	R P Jain	Tata McGraw Hill.
4.	Electronic Communication Systems	G. Kennedy	McGraw Hill, 4th Edition

List of Experiments

1. Familiarization with electronic components and usage of Multimeter
2. Familiarization with CRO and Signal Generator.
3. To study the V-I characteristics of pn junction diode and determine static resistance and dynamic resistance.
4. To implement clipper and clamper circuits.
5. To plot the characteristics of BJT configurations.
6. To verify Truth Table of different logic gates.
7. To verify Truth Table of different flip-flops.
8. To study Op-amp as summing amplifier.
9. To study Op-amp difference amplifier.
10. To study Op-amp integrator and differentiator.
11. A project related to implementation of application based Electronic Circuit on a general

purpose PCB.

Course Code	ME 203 / ME103
Course Title	Workshop Practice
Type of Course	Core
Course Assessment Methods Practical (Continuous and end semester evaluation)	50
Course Prerequisites	Basic Workshop Practices
Course Objectives (CO)	<ol style="list-style-type: none">1. To know different machines, tools and equipment, Identify different Engineering materials, metals and non-metals.2. To understand different Mechanisms, Use of Machines, Tools and Equipment.3. Knowledge of basic Manufacturing Processes in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal.Smithy, Foundry and Carpentry Workshops.
Course Outcome	<ol style="list-style-type: none">1. Familiarity with common machines, Tools and Equipment in basic Workshop Practices.2. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops in Engineering professions.3. Applications of Basic Workshop Practices.

SYLLABUS

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly.

Practice of basic exercises related with different shops. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops in Engineering professions.

Welding Workshop :

(Theory)Joining Processes, Welding and its Classification, Welding Processes, Fusion Welding, Pressure Welding, Electric Arc Welding, Gas Welding, Resistance Welding, Metal Inert gas Welding, Welding Joints, Welding Positions, Welding defects, Welding Applications, Basic welding design and Procedures, identification of materials,

Jobs: Butt Joint in Flat Position using SMAW, Lap Joint using Spot Welding, Edge Joint in Horizontal Position using SMAW, Tee Joint in Flat position using SMAW, Corner Joint in vertical position using SMAW.

Defect Identification and marking, Edge preparation and Fillet making, Tacking, Distortion identification.

Electronics Workshop

To know about Soldering mechanism and techniques, Familiarity with Electronic Components / symbols, Testing of electronic components, Application of Soldering : Circuit Assembly

List of Jobs :

Practice of Soldering and de-soldering, Identification and testing of a) passive electronic components
b) Active electronic components, Assembly of Regulated Power supply circuit.

Electrical Workshop

Introduction of Various Electric wirings, Wiring Systems, Electrical wiring material and fitting, different type of cables, Conduit pipe and its fitting, inspection points, switches of all types, Distribution boards, M.C.B's etc., Electric Shock and its management.

Electric Tools: Conversance with various tools and to carry out the following:

- a) Measurement of wire sizes using SWG and micrometer
- b) Identification of Phase and neutral in single phase supply

Jobs:

To control a lamp with a single way switch

To control a lamp from two different places

To assemble a fluorescent lamp with its accessories

To control a lamp, fan and a three pin socket in parallel connection with single way switches

Fitting Shop

Introduction of Fitting, different type of operations, Tools, materials, precision instruments like Vernier caliper and Micrometer etc, Safety precautions and Practical demonstration of tools and equipments

Jobs:

To make a square from MS Flat, Punching, Cutting, Filling techniques and practice, Tapping, Counter Drilling.

Smithy Workshop

Introduction of Smithy and Forging process, Tools and Equipment's, Operations, Heat Treatment processes, Advantages, Dis-advantages, Defects and Safety precautions.

Jobs:

Drawing and Upsetting Practice using Open Hearth Furnace, Cold working process practice, Heat Treatment \: Annealing and hardening process

Machine Shop

Application, Function and different parts, Operations of Lathe, Type of Cutting Tools and their materials, Drill machine Types, applications and Functions. Hacksaw machines and functions, Work Holding devices and tools, chucks, Vices, machine Vices, V Block, Measuring Instruments uses, Shaper and Milling machine Applications.

Jobs:

To perform Marking, Facing, Turning, taper Turning, Grooving, Knurling, parting, Drilling, Reaming operations on lathe machine, Hacksawing practice on Power hacksaw, Shaping operation practice on Shaper.

Carpentry Shop

Classification of Tree, Timber. Advantages and uses of Timber, Seasoning of Wood, Tools Used, Defects and Prevention of Wood,

Jobs:

Tee Joint, Cross Joint, Tenon Joint, L Shape Joint, Practice of Wood Working Lathe, Practice on multi-purpose Planer.

Foundry Shop

Introduction to Foundry, Advantages and Disadvantages of castings process, Introduction to pattern and various hand tools, Ingredients of Green sands, Various Hand Molding processes, Introduction to Casting Defects.

Jobs:

Identification and uses of hand tools, Preparation of Green sand in Muller, Preparation of Sand Mould of Single piece solid pattern, Split pattern, Preparation of Green sand Core, casting of a Mould and study its defects.

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Introduction to Basic Manufacturing Processes and Workshop Technology	Rajender Singh	New Age International Publication
2	Manufacturing Processes	Chapman	Viva Books Private Limited

Course Code	CH101 / CH201
Course Title	Applied Chemistry
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz) Practical (Continuous and end semester evaluation)	50 50 50
Course Prerequisites	10+2
Course Objectives (CO)	To teach the fundamentals of basic chemical sciences essential for the development of new technologies to all branches of engineering.
Course Outcome	1) Thermodynamics will help the students learn different thermodynamic laws, heat changes and energy calculations. 2) Studying catalysis will be beneficial to understand the role and mechanism of various heterogeneous and homogeneous catalysts in increasing reactions rate of many synthetically important chemical reactions. 3) By studying corrosion, the students will learn about basic nature and reasons of corrosion, its impact in many sectors of our lives. 4) Studying spectroscopy will help to understand the basic principles of spectroscopy and its use to determine chemical structures. 5) By studying coordination chemistry and CFT, explanation about different properties of coordination compounds will be given.

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Thermodynamics: Review of objectives and limitations of chemical thermodynamics, State

functions, Thermodynamic equilibrium, work, heat, internal energy, enthalpy, heat capacity, Zeroth law of thermodynamics, First law of thermodynamics, Reversible, isothermal and adiabatic expansion & compression of an ideal gas. Irreversible isothermal and adiabatic expansion of an ideal gas. Carnot cycle and efficiency of reversible engines, Enthalpy change and its measurement. Flame temperature, Second and third law of thermodynamics. Concept of entropy. Gibb's and Helmholtz equations. Simple numerical for calculating w , q , ΔE , ΔH and entropy.

(10 hours)

Catalysis: Catalysis and general characteristics of a catalytic reactions, homogeneous catalysis, kinetics of acid, base and enzyme catalysis – Michaelis-Menten equations. Heterogeneous catalysis. Application of catalysis for industrially important processes– hydrogenation (Wilkinson's catalyst), hydroformylation, acetic acid process and Wacker process.

(6 hours)

Electrochemistry: Introduction to electrochemistry, types of electrodes, Ion selective electrodes, Reference electrodes, Fuel cells (hydrogen-oxygen, propane-oxygen, methanol-oxygen fuel cells), Corrosion: Types of corrosion, dry and wet corrosion and their mechanisms, types of electrochemical corrosion (galvanic, pitting, waterline, differential aeration, soil, microbiological, inter-granular, stress corrosion), Factors influencing corrosion, Prevention of corrosion.

(8 hours)

SECTION - B

Polymer chemistry: Classification of polymers, Mechanism and methods of polymerisation, idea of number average and weight average molecular masses of polymers, preparation, properties and uses of polystyrene, polyester, polyamide, phenol-formaldehyde, silicones and epoxy resins.

(5hours)

Spectroscopy: UV- Introduction, Lambert-Beer's Law, selection rules, electronic transitions, Application to simple organic molecules (auxochrome, chromophore), effect of conjugation and solvent on transition of organic molecules, Woodward-Fieser Rules for calculating λ_{max} for dienes. IR- Introduction, Principle of IR spectroscopy-Fundamental vibrations, Application to simple organic molecules (effect of masses of atoms, bond strength, nature of substituent, hydrogen bonding on IR frequency), sample preparation for IR.

(10 hours)

Coordination chemistry: Introduction, Crystal Field Theory, Splitting of octahedral, tetrahedral and square planar complexes, crystal field stabilization energies of octahedral and tetrahedral complexes and its applications.

(6 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Organic Chemistry	Joseph M. Hornback Brooke	Cole Publishing Company U.S.A.
2.	Atkin's Physical Chemistry	Peter Atkins, Julio de Paula	7 th Edition, Oxford University Press.
3.	Concise Inorganic Chemistry	J D Lee	Vth Edition, Chapman & Hall, 2003
4.	A Textbook of Engineering Chemistry	Shashi Chawla	Dhanpat Rai & Co. Pvt. Ltd
5.	Introductory Polymer Chemistry	G.S.Mishra	John Wiley & Sons, New York, 1993.
6.	Principles of Physical Chemistry	Puri, Sharma and Pathania	W.H. Freeman & Co, 2008.
7.	Introduction to spectroscopy	D. S. Pavia, G.M. Lasmpman and G.S. Kriz	4 th Edition, Thomson learning, Indian Edition 208.
8	Basic Inorganic Chemistry	F.A. Cotton, G. Wilkinson and P.L. Gaus	3rd Ed., John Wiley & Sons.

List of Experiments

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly and has to perform any eight experiments.

1. Volumetric analysis: Iodometric titrations, complexometric titrations, Acid-base titrations (conductometric), Precipitation titrations
2. Analysis of lubricants: Viscosity/surface tension/saponification value/acid value
3. Instrumental techniques for chemical analysis: Conductometry, potentiometry, UV-visible/IR spectrophotometer.
4. Preparation of few organic compounds/inorganic complexes/polymer.

RECOMMENDED BOOKS

S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	A textbook of Quantitative Inorganic Analysis	A. I. Vogel	Longman Gp. Ltd, 4 th editon
2	Essentials of Experimental Engineering Chemistry	Shashi Chawla	Dhanpat Rai and Co. Delhi (2001)
3	Vogel's text book of quantitative chemical analysis	J. Mendham, R. C. Denny, J. D. Barnes and M. J. K. Thomas	Pearson Education

Course Code	HSS102 / HS202
Course Title	Communication Skills

Course Outcome	

SYLLABUS

Note for Examiner: The semester question paper will be of 50 marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

Fundamentals of Communication Skills

Scope and Significance of Communication Skills, Listening, Speaking, Reading and Writing

(2 hours)

Writing Skills

Basics of Grammar – Word Order, Sentence Construction, Placing of Subject and Verbs, Parts of Speech, Use of Tenses, Articles, Prepositions, Phrasal Verbs, Active-Passive, Narration.

(4 hours)

Vocabulary Building and Writing

Word Formations, Synonyms, Antonyms, Homonyms, One-Word Substitutes, Idioms and Phrases, Abbreviations of Scientific and Technical Words

(3 hours)

Speaking Skills

Introduction to Phonetic Sounds, English Phonemes, Stress, Rhythm and Intonation, Countering Stage Fright and Barriers of Communication

(3 hours)

Reading and Comprehension

(2 hours)

SECTION-B

Advanced Communication Skills

Scope, Significance, Process of Communication in an organization, Types and Levels, Communication Networks, Technical Communication, Tools of Effective Communication

(2 hours)

Speaking Skills and Personality Development

Interpersonal Communication, Presentation Skills, Body Language and Voice Modulation, Persuasion, Negotiation and Linguistic Programming, Public Speaking, Group Discussions, Interviews and Case Studies, Power Point Presentations, Relevant to the context and locale, Technical Presentations, Conducting, Meeting and Conferences.

(5 hours)

Communication and Media

Social and Political Context of Communication, Recent Developments in Media

(1 hour)

Advanced Techniques in Speaking Skills

Importance of Listening/Responding to native and global accents, Telephonic Interviews and Video Conferencing

(2 hours)

Advanced Techniques in Technical Writing

Job Application, CV Writing, Business Letters, Memos, Minutes, Reports and Report Writing Strategies, E-mail Etiquette, Blog Writing, Instruction Manuals and Technical Proposals

(4 hours)

Practical Sessions

1. Individual presentations with stress on delivery and content
2. Overcoming Stage Fright - Debates, extempore
3. How to discuss in a group - Group Discussion
4. Discussion on recent developments and current debates in the media
5. How to prepare for an Interview and face it with confidence
6. Conducting meeting and conferences
7. Exercises on Composition & Comprehension, Reading Improvement

TEXT BOOKS

Course Code	CS104 / CS204
Course Title	Computer Programming
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	
Course Objectives (CO)	To get basic knowledge of computers, its components and Operating systems and Linux. Shell Commands. To acquire programming skills in C and basic knowledge of Object Oriented Programming.
Course Outcome	

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

Introduction

Computer Basic, Block Diagram of Computer, Memory Hierarchy, Types of RAM, Secondary Memory Introduction to Operating Systems, Programming Languages, Program Structure, Linux Shell Commands, Bourne Shell, C Shell, Korn Shell (8 hours)

Basic Constructs of C:

Keywords, Identifiers, Variables, Symbolic Constants, Data Types and their storage, Operands, Arithmetic Operators, Relational Operators, Logical Operators, Bitwise Operators, Increment & Decrement Operators, Expressions, Conditional Expressions, Assignment Operators and Expressions, Type Conversions, Precedence and Order of Evaluation, External Variables and Scope of Variables. Basic Input Output, Formatted I/O. (8 hours)

Program Control Flow

Statements and Blocks, Conditional Statements, IF, ELSE-IF, Switch Case statements, Control Loops, For, While and Do-While, Go to and Labels. (4 hours)

Arrays & Functions

Pointers and Addresses, Arrays, Multi dimensional arrays, strings, pointer arrays, Functions, Function Prototyping, Scope of functions, Arguments, Call by value and call by references, static variables, recursion. (8 hours)

SECTION - B

Structures

Structures, Array of Structures, pointer to structures, Typedef, Unions, Bit fields, passing structures as an argument to functions, C-Preprocessor and Macros, Command line arguments.

(4 hours)

Input and Output

Standard and Formatted Input and Output, File Access & its types, Line Input and Output, Types of Files, Binary & ASCII Files, Error handling, stderr and exit functions (7 hours)

Introduction to Object Oriented Programming:

Classes and Objects, Structures vs Classes, Abstraction, Encapsulation, Polymorphism, Inheritance.

(6 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	The C Programming Language	Brian Kernighan and Dennis M. Ritchie	Prentice Hall, 2 nd Edition 2007
2.	Fundamentals of Information Technology and Computer Programming	V. K. Jain	PHI. Latest Edition
3.	C Programming : A Modern Approach	Michael D. Greenberg	W.W. Norton Company 2 nd edition (2008).
4.	C: The Complete Reference	Herbert Schildt	Tata McGraw Hill, 4 th edition.
5.	Let us C++	Yashwant Kanetkar	BPB Publications
6.	Programming in ANSI C++	E. Balaguruswamy	TMH publications, edition, Reprint (2008).
7.	Programming in ANSI C, Scha series	Gottfried	TMH Publications, 2 nd edition (1996)

List of experiments

Instruction for Students: The candidate will be attending a laboratory session of 2 hours weekly and students have to perform the practical related to the following list.

1. Introduction to UNIX Shells, C Shell, Bourne Shell, Korn Shell
2. Writing and compiling C Program in Linux.
3. Introduction to basic structure of C program, utility of header and library files.
4. Implementation of program related to the basic constructs in C
5. Program using different data types in C
6. Programs using Loops and Conditional Statements in C
7. Programs using arrays single dimension and multi dimensions in C.
8. Implementation of Matrices and their basic functions such as addition, subtraction, multiplication, inverse.
9. Programs using functions by passing values using call by value and call by reference method
10. Programs related to structures and unions
11. Program to implement array using pointers
12. Programs related to string handling in C
13. Program to manage I/O files
14. Introduction to classes and program related to basic use of classes showing their advantages over structures.
15. Any other program related to theory program to enhance the understanding of students in the subject.

SECOND SEMESTER

Course Code	MATHS201
Course Title	Differential Equations and Transforms
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz)	50 50
Course Prerequisites	Calculus (MATHS101)
Course Objectives (CO)	<ol style="list-style-type: none">1.To learn the methods to formulate and solve linear differential equations and their applications to engineering problems2.To learn the concepts of Laplace transforms and to evaluate Laplace transforms and inverse Laplace transform3.To apply Laplace transforms to solve ordinary differential equations4.To learn the concept of Fourier series, integrals and transforms.5.To learn how to solve heat, wave and Laplace equations.
Course Outcome	<ol style="list-style-type: none">1. The student will learn to solve Ordinary Differential equations.2. The students will be able to apply the tools of Laplace Transforms to model engineering problems and solve the resulting differential equations.3. Students will understand the nature and behavior of trigonometric (Fourier) series and apply it to solve boundary value problems.

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

Ordinary differential equations : Review of geometrical meaning of the differential equation, directional fields, exact differential equations(scope as in chapter 8, sections 8.1 – 8.10 of reference 2), solution of differential equations with constant coefficients; methods of differential operators (scope as in chapter 9, sections 9.1 – 9.5 of reference 2). Non-homogeneous equations of second order with constant coefficients: Solution by method of variation of parameters, reduction by order (scope as in chapter 9, section 9.7, 9.10 of reference 2). Power series method of solution(scope as in chapter 10, section 10.2 of reference 2). (13 hours)

Laplace Transforms : Laplace transform, Inverse transforms, shifting, transform of derivatives and integrals. Unit step function, second shifting theorem, Dirac's Delta function. Differentiation and integration of transforms. Convolution Theorem on Laplace Transforms. Application of Laplace transforms to solve ordinary differential equations with initial conditions (Scope as in Chapter 5, Sections 5.1 – 5.5 of Reference 1). (10 hours)

SECTION – B

Fourier Series and Transforms: Periodic functions, Fourier series, Even and odd series, half range expansions, Complex Fourier Series, Approximation by trigonometric polynomials. Fourier integrals, Fourier Cosine and Sine transforms, Fourier Transforms (Scope as in Chapter 10, Sections 10.1 – 10.5, 10.7 – 10.10 of Reference 1). (8 hours)

Partial Differential Equations: Partial differential equations of first order, origin, solution of linear partial differential equations of first order, Integral surfaces passing through a given curve (Scope as in Chapter 2, Sections 1, 2, 4, 5 of Reference 4). (6 hours)

Boundary Value Problems: D'Alembert's solution of wave equation, separation of variables: one dimension and two dimension heat and wave equation, Laplace equation in Cartesian and Polar coordinates (Scope as in Chapter 11, Sections 11.1, 11.3 – 11.5, 11.8 – 11.9 of Reference 1). (8 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Elements of Partial Differential Equations	Ian N. Sneedon	McGraw Hill,Singapore 1957.
2.	Advanced Engineering Mathematics	E. Kreyszig.	8th edition , John Wiley.
3.	Advanced Engineering	Michael D. Greenberg	2 nd edition, Pearson

	Mathematics		Education.
4.	Advanced Engineering Mathematics	Wylie and Barrett	Tata McGraw Hill
5.	Higher Engineering Mathematics	B.V.Ramana	Tata McGraw Hill.
6.	Advanced Engineering Mathematics	R. K. Jain, S. R. K. Iyenger	Narosa Publications
7.	Theory and problems of Differential Equations	Frank Ayers	Shuam outline series, McGraw-Hill, Singapore, 1957

Course Code	HSS 201 / HSS 101
Course Title	Ethics and Self Awareness
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz)	50 50
Course Prerequisites	
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Introduction to Ethics: Concept of Ethics – Nature, Scope, Sources, Types, Functions and Factors influencing Ethics, Approaches to Ethics – Psychological, Philosophical and Social, Broader Ethical Issues in Society. (6 hours)

Values, Norms, Standards and Morality: Concept and Role, Relation with Ethics, Psycho-Social Theories of Moral Development – Kohlberg and Carol Gilligan. (4 hours)

Ethics and Business

Concept of Business Ethics – Nature, Objectives and Factors influencing Business Ethics, 3 C's of Business Ethics, Ethics in Business Activities, Ethical Dilemmas in Business, Managing Ethics (5 hours)

SECTION— B

Self-Awareness: Concept of Self Awareness – Need, Elements, Self Assessment – SWOT Analysis, Self Concepts – Self-Knowledge, Assertiveness and Self-Confidence, Self-Esteem. (4 hours)

Self-Development :Concept of Self-Development, Social Intelligence, Emotional Intelligence, Managing Time and Stress, Positive Human Qualities (Self-Efficacy, Empathy, Gratitude, Compassion, Forgiveness and Motivation), Personality Development Models – Johari Window,

Transactional Analysis, Myers Briggs Type Indicator, Self-Awareness and Self-Development Exercises. (11hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Business Ethics – Text and Cases	C.S.V. Murthy	Himalaya Publishing House
2.	Business Ethics	Hartman, Laura P. And Chatterjee, Abha	Tata McGraw Hill
3.	Business Ethics and Professional Values	A. B. Rao	Excel Books
4.	Business Ethics – Concepts and cases	Manuel G. Velasquez	Prentice Hall
5.	Issues and Ethics in the Helping Professions	G. Corey, M. Schneider Corey, P. Callanan	Brooks/Cole
6.	Theories of Personality	S. Calvin Hall, Dardner Lindzey and John B. Cambell	Hamilton Printing Company
7.	The Curse of Self-awareness, Egotism and the Quality of Human Life	M. R. Leary	Oxford University Press
8.	Self – Awareness	Allan Twain	

Physics Course 1

Any one of the following three papers to be chosen by institute

Course Code	APH 101 / APH 201
Course Title	Oscillations and Optics
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	10+2
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for Examiner: The semester question paper will be of 50 marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

Ultrasonics: Production and detection of ultrasonics (2 hours)

SHM: Review of SHM, superposition of two SHM in one dimension, charge oscillations in LC circuits (3 hours)

Damped Oscillations: Concept and cause of damping, differential equation of a damped oscillator and different kinds of damping, Methods of describing damping of an oscillator - logarithmic decrement, relaxation time, quality factor, band width. Series LCR circuit as a damped oscillator. (3 hours)

Forced Oscillations: States of forced oscillations, differential equation of forced oscillator – its displacement, velocity and impedance, behaviour of displacement and velocity with driver's

frequency, Power, bandwidth, Quality factor and amplification of forced oscillator, resonance in forced oscillators, forced oscillations in series LCR circuit (4 hours)

Wave Motion: Wave equation and its solution, characteristic impedance of a string, reflection and transmission of waves on a string at a boundary, reflection and transmission of energy, the matching of impedances . (3 hours)

SECTION – B

Interference: Division of wave front and amplitude; Fresnel's biprism, Newton's rings, Michelson interferometer and its applications for determination of λ and $d\lambda$. (4 hours)

Diffraction: Fresnel and Fraunhofer diffraction, qualitative changes in diffraction pattern on moving from single slit to double slit, plane transmission grating, dispersive power & resolving power of a grating. (5 hours)

Polarization: Methods of polarization, analysis of polarized light, quarter and half wave plates, double refraction. (4 hours)

Lasers: Elementary idea of LASER production, spontaneous emission, stimulated emission, Einstein's coefficients, Helium-Neon, Ruby and semiconductor lasers, applications of lasers. (4 hours)

Fibre Optics: Basics of optical fibre - its numerical aperture, coherent bundle, step index and graded index fibre, material dispersion, fibre Optics sensors, applications of optical fibre in communication systems. (3 hours)

Holography: Basic principle, theory and requirements, applications (2 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Physics for Engineers	N. K. Verma	Prentice Hall India
2.	Physics of Vibrations and Waves	H. J. Pain	5 th edition, John Wiley & Sons
3.	Vibrations and Waves	A. P. French	CBS Publishers
4.	Optics	Ajoy Ghatak	McGraw Hill Publications

Course Code	APH 101 / APH 201
Course Title	Oscillations and Optics (Practical)
Type of Course	Core
L T P	4 0 3
Credits	1
Course Assessment Methods Internal Assessment	50

List of Experiments

1. To study Lissajous figures obtained by superposition of oscillations with different frequencies and phases.
2. To find the wavelength of sodium light using Fresnel's biprism.
3. (i) To determine the wavelength of He-Ne laser using transmission grating.
(ii) To determine the slit width using the diffraction pattern.
4. To determine the wave length of sodium light by Newton's rings method.
5. To determine the wave length of sodium light using a diffraction grating.
6. To find the specific rotation of sugar solution using a Bi-quartz Polarimeter.
7. To design a hollow prism and used it find the refractive index of a given liquid.
8. To determine the wavelength of laser using Michelson interferometer.

Course Code	APH 103 / APH 203
Course Title	Quantum and Statistical Physics
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION – A

Special Theory of Relativity: Inertial and non-inertial frames of reference, Galilean transformation, Michelson Morley Experiment, postulates of special theory of relativity, Lorentz transformation, Simultaneity, Length contraction, Time dilation, Doppler effect, Addition of velocities, variation of mass with velocity, mass-energy relation . (7 hours)

Origin and Postulates of Quantum Physics: Quantum theory of light, X-rays production, spectrum & diffraction (Bragg's law), photoelectric effect, Compton effect, pair production, photons & gravity, black holes, de-Broglie hypothesis, particle diffraction, uncertainty principle and applications (7 hours)

Postulates of quantum mechanics, Schrodinger theory, time-dependent and time-independent Schrodinger equation, wave function, Born interpretation and normalization, expectation values (3 hours)

SECTION - B

Applications of Quantum Physics: Particle in a box (infinite potential well), finite potential step and barrier problems, tunneling, linear harmonic oscillator (one-dimensional). (4 hours)

Hydrogen atom (qualitative), radiative transitions and selection rules, Zeeman effect, Spin-orbit coupling, electron spin, Stern-Gerlach experiment, exclusion principle, symmetric and antisymmetric wavefunctions (5 hours)

Statistical Physics: Maxwell-Boltzmann statistics, molecular energies in an ideal gas, Bose-Einstein and Fermi-Dirac statistics, black body radiation, Rayleigh-Jeans and Planck's radiation laws, free electrons in a metal, electron-energy distribution, Fermi energy, electronic specific heat, conduction in metals, thermionic emission. (10 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Concepts of Modern Physics	Arthur Beiser	McGraw Hill Publications
2.	Solid State Physics	C. Kittel	Wiley Eastern Publications
3.	Solid State Physics	S. O. Pillai	New Age International
4.	Statistical Physics Thermodynamics	V. S. Bhatia	

List of Experiments

- 1) To study the quantized energy level of the first excited state in the Argon using the Frank-Hertz setup.
- 2) To find the value of Planck's constant and evaluate the work function of cathode material by used of photoelectric cell.
- 3) To study various characteristics of photo-voltaic cell: (a) Voltage-current characteristics, (b) loading characteristics, (c) power-resistance characteristics and (d) inverse square law behavior of the photo-current with distance of source of light from photo-voltaic cell
- 4) To study the response of a photo-resistor to varying intensity of light falling on it and deduce spectral sensitivity of its semiconductor material.
- 5) To study the Balmer Series of Mercury and Hydrogen spectrum using diffraction grating and calculate Rydberg constant.
- 6) To evaluate charge on an oil drop using Millikan's oil drop method.
- 7) To verify Rutherford's alpha scattering formula using a mechanical model.

Course Code	APH 107 / APH 207
Course Title	Physics of Materials
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	10+2
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for Examiner: The semester question paper will be of 50 marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION – A

Crystal structure: Bonding forces and energies, Primary and Secondary bonds, Space Lattices, Symmetries in a cubic lattice, Crystal Structures (cubic and hexagonal cells), Assignment of coordinates, directions and planes in crystals, Linear, Planar and Space densities in crystals, close packed morphology (Hexagonal and cubic close packing), single and polycrystalline structures, interstitial spaces (trigonal, tetrahedral and octahedral voids)

Structure of ceramics (NaCl, Zinc blende, silica and silicates, diamond crystal, Graphite, Fullerenes and carbon nanotubes)

Structure of polymers, crystallinity of long chain polymers

Crystal Structure analysis, X-ray diffraction and Bragg's law, Powder method for study of X-ray diffraction pattern

Crystal Defects (Point, line, surface and volume imperfections) (14 hours)

Diffusion: Diffusion mechanisms, steady state diffusion, non-steady state diffusion, factors affecting diffusion, applications based on diffusion (corrosion resistance of Duralumin, carburization of steel, decarburization of steel, doping of semiconductors) (3 hours)

Elastic, Anelastic and Viscoelastic Behaviour Elastic behaviour and its atomic model, rubber like elasticity, anelastic behaviour, relaxation processes, viscoelastic behaviour, spring-dashpot model (3 hours)

SECTION - B

Plastic Deformations and strengthening mechanisms : Tensile properties (Yield strength, Tensile Strength, Ductility, Resilience, Toughness), Dislocations and plastic deformation, characteristics of dislocations, slip systems, slip in single crystals, plastic deformation of polycrystalline materials, mechanisms of strengthening in metals (grain size reduction, solid-solution strengthening, strain hardening), recovery, recrystallization and grain growth (5hours)

Fracture, Fatigue and Creep : Fracture (Ductile and brittle fractures), principles of fracture mechanics, fracture toughness, ductile to brittle transitions Cyclic stresses, S-N curve, crack initiation and propagation, factors that affect fatigue life, environmental effects, generalized creep behavior, stress and temperature effects. (5 hours)

Phase Diagrams : One-Component (or Unary) Phase Diagrams, Binary Isomorphous Systems, Interpretation of Phase Diagrams, Development of Microstructure in Isomorphous Alloys, Mechanical Properties of Isomorphous Alloys ,Binary Eutectic Systems, Development of Microstructure in Eutectic Alloy, Equilibrium Diagrams Having Intermediate Phases or Compounds, Eutectic and Peritectic Reactions, The Gibbs Phase -Rule (6 hours)

Phase Transformations: Kinetics of phase transformation, kinetics of solid state reactions, Isothermal transformation diagrams, continuous cooling transformation, temper embrittlement (4 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Material science and engineering – An Introduction	William D Callister	6 Th edition, John Willey and Sons.
2.	Material Science and	V. Raghvan	4 th edition, Eastern

	Engineering – A First Course		economy edition
3.	Solid State Physics	S. O. Pillai	New Age International
4.	Introduction to Solids	Leonid V Azaroff	Tata McGraw Hill, 3 rd edition.

List of Experiments

1. To find the energy band gap of the given semiconductor by four probe method.
2. To study the Hall Effect of a given semiconductor.
3. To determine the dielectric constant of the given materials.
4. To study the B-H curve of the ferromagnetic materials.
5. To determine the value of e/m for electron by long solenoid (helical) method.
6. To study the variation of magnetic field with distance along the axis of a circular coil carrying current by plotting a graph.
7. To find the Curie temperature of a Ferroelectric material by measuring Capacitance as a function of temperature.
8. To determine the thermal conductivity of an insulator material using guarded plate method (Lee's disc method).
9. To Study (a) Voltage-current characteristics (b) loading characteristics (c) Power-Resistance characteristics and (d) intensity response of photovoltaic cell.

Course Code	GS 101 / GS 201
Course Title	Introduction to Environment Science
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz)	50 50
Course Prerequisites	10+2
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

General: Introduction, components of the environment, environmental degradation. (4 hours)

Ecology: Elements of ecology: Ecological balance and consequences of change, principles of environmental impact assessment. (4 hours)

Air pollution and control: Atmospheric composition, energy balance, climate, weather, dispersion, sources and effects of pollutants, primary and secondary pollutants, green house effect, depletion of ozone layer, standards and control measures. (6 hours)

SECTION - B

Water pollution and control: Hydrosphere, natural water, pollutants their origin and effects, river/lake/ground water pollution, standards and control. (6 hours)

Land Pollution: Lithosphere, pollutants (municipal, industrial, commercial, agricultural, hazardous solid wastes): their origin and effects, collection and disposal of solid waste, recovery and conversion methods. (6 hours)

Noise Pollution: Sources, effects, standards and control. (6 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Introduction to Environmental Engineering and Science	C. M. Masters	Prentice Hall of India Pvt. Ltd., 1991
2.	Environmental Science	B. J. Nebel	Prentice Hall Inc., 1987

Course Code	EC 201
Course Title	ANALOG ELECTRONIC CIRCUITS –I
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz) Practical (Continuous and end semester evaluation)	50 50 50
Course Prerequisites	
Course Objectives (CO)	1. To provide the capability to use abstractions to analyze and design simple electronic circuits. 2. To make students understand transistors and its biasing and how complex devices such as Bipolar Junction Transistors are modeled and the use of the mathematical models in the design and analysis of various circuits. 3. To familiarize the student with the analysis and design of basic transistor amplifier circuits, feedback amplifiers, oscillators and power amplifiers.
Course Outcome	

SYLLABUS

Note for Examiner: The semester question paper will be of 50 marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION – A

Transistor and its Biasing: Transistor operation and Characteristics, CB, CC and CE configurations, Operating point, Bias stability, various biasing circuits, stabilization against variation in I_{co} , V_{be} and β , Bias compensation, Thermistor and Sensistor compensation, Thermal Runaway, Thermal stability.

(8 hours)

BJT Modeling: Transistor as an amplifier, comparison of CB, CC and CE amplifier stages, BJT modeling, Important parameters: Input Impedance, Output Impedance, voltage and current gain, Transistor h-parameters, conversion formulas, r_e model, analysis of transistor amplifiers using h-parameters. (8 hours)

Field Effect Transistors: Introduction, FET Construction, types of FET, Characteristics of FETs, MOSFET: types and working principle, FET biasing, FET small signal model, FET applications. (6 hours)

SECTION - B

BJT Frequency Response: Frequency Response of single stage CE amplifier, Multistage amplifiers, Direct coupled, RC coupled and Transformer coupled, frequency response of multistage amplifiers, cascode circuits. (6hours)

Oscillators: Introduction to feedback, basic principles of sinusoidal oscillators, condition for sustained oscillations, tuned collector, tuned base, Hartley oscillator, Colpitt's Oscillator, Phase Shift Oscillator, Wein Bridge Oscillator and Crystal Oscillator. (8 hours)

Power Amplifiers: Classification of amplifiers, Single tuned and double tuned amplifiers, analysis of class A, B, C and AB amplifiers, push pull amplifier, complementary symmetry, amplitude distortion in amplifiers, harmonics, power distortion, heat sinks. (8 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Integrated electronics	Millman & Halkias	TMH
2.	Electronics Devices & Circuit Theory	RL Boylestead & L Nashelsky	PHI
3.	Microelectronic Circuits	AS Sedra & KC Smith	OXFORD
4.	Electronics Circuit Analysis and Design	Donald A. Neamen	Tata McGraw Hill

List of Experiments

1. Familiarization with electronic components and usage of Multimeter
2. Familiarization with CRO and Signal Generator.
3. To study the V-I characteristics of pn junction diode and determine static resistance and dynamic resistance.
4. To implement clipper and clamper circuits.
5. To plot the characteristics of BJT
6. To plot the frequency response of a single stage BJT amplifier.
7. To measure the voltage and current gain of a BJT amplifier.
8. To plot the characteristics of FET.
9. To verify the operation of BJT as an amplifier and draw the frequency response RC coupled amplifier.
10. To measure the distortion in the output of a push pull amplifier.

All these experiments are to be performed on bread board and simulated in Pspice software.

Course Code	EC 203
Course Title	Digital Design
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz) Practical (Continuous and end semester evaluation)	50 50 50
Course Prerequisites	
Course Objectives (CO)	1. To apply minimization techniques for reducing the functions up to six variables. 2. To design various combinational circuits 3. To write the truth table, excitation table, characteristic equations of various flip flops and to design the sequential circuits using Flip flops. 4. To familiarize the various A/D, D/A Converters, Logic families and their characteristics.
Course Outcome	

SYLLABUS

Note for Examiner: The semester question paper will be of 50 marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION – A

Minimization Techniques

Sum of Products and Products of Sum forms, Minterms & Maxterms, Karnaugh Map for two, three, four five and six variables, Quine-McCluskey method. (6 hours)

Combinational Circuit Design

Half adder, full adder, subtractor, BCD adder, comparator, code converter, encoder decoder, multiplexer, demultiplexer, parity detector and generator, PLA, PAL and ROM

(6 hours)

Flip Flops

1-bit memory cell, clocked and unclocked flip flops, S-R Flip flop, D flip flop, JK Flip flop, T flip flop, edge triggered flip flop, race around condition, Master slave flip flop, conversion of flip flops.
(6 hours)

Counters

Ripple counter, design of Mod-N ripple counter, design of synchronous counter with and without lockout condition, decade counter, ring counter, Johnson counter
(4 hours)

SECTION - B**Shift Registers**

Serial in serial out shift register, serial in parallel out shift register, parallel in serial out shift register and parallel in parallel out shift register, bidirectional shift register, universal shift register.
(5hours)

A/D And D/A Converters

Weighted resistor D/A converter, Binary ladder D/A converter. A/D Converters- flash type, successive approximation, counter ramp type, dual slope type, characteristics of ADC and DAC.
(6 hours)

Logic Families

Characteristics of logic families, RTL, TTL, ECL, DTL, DCTL, I²L, HTL, CMOS logic families.
(9 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Digital Design	Morris Mano	PHI, 4 th edition
2.	Digital principles and Applications	Malvino Leach	
3.	Digital System Principles and Applications	R J Tocci	PHI
4.	Modern Digital Electronics	R P Jain	TMH
5.	Digital Integrated Electronics	Taub Schilling	TMH

List of Experiments

1. To Study the data sheets of TTL and ECL gates
2. Implementation of Adder and Subtractor using Logic Gates.
3. Implementation of Binary Adder/Subtractor.
4. Implementation of BCD Adder.
5. Design & implementation of Combinational circuits using Multiplexers
6. Design and implement a Universal shift register having shift-right, shift-left, SISO, PIPO capabilities.
7. Implementation of Flip-flops using Logic Gates.
8. Implementations of Ripple counter.
9. Implementation of Modulo-N Synchronous Counter.
10. Implementation of Synchronous counters with unused states and/or avoiding Lock Out condition.
11. To convert 8 bit Digital data to Analog value using DAC
12. To convert Analog value into 8 bit Digital data using ADC.

1.	IPD201	Innovative product design	0-0-20	20	0+2	Nil	Nil	50

Note: Students will undergo four week in-house training during summer vacations in their respective branches. They will be trained to handle laboratory and practical aspects in their field of engineering.

The marks and credits of Innovative product design (IPD201) will be added in the second semester mark-sheet.

* Practical marks are for continuous and end semester evaluation

Any one of the following three papers to be chosen by the institute

Paper Title: Oscillation and optics Paper Code: APH 101/ APH 201

Paper Title: Quantum and Statistical Physics Paper Code: APH 103/ APH 203

Paper Title: Physics of Materials Paper Code: APH 207/ APH 107

FIRST SEMESTER

Course Code	MATHS101
Course Title	Calculus
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz)	50 50
Course Prerequisites	10+2
Course Objectives (CO)	<ol style="list-style-type: none">1. To understand the behaviour of infinite series and its use.2. To learn the concepts of functions of two and more than two variables and their applications.3. To learn the methods to evaluate multiple integrals and their applications to various problems.4. To understand the concepts of Vector calculus and their use in engineering problems.
Course Outcome	<ol style="list-style-type: none">1. The students are able to test the behaviour of infinite series.2. Ability to analyze functions of more than two variables and their applications.3. Ability to evaluate multiple integrals and apply them to practical problems.4. Ability to apply vector calculus to engineering problems

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

Functions of one variable

Sequences and Series: Sequences, Limits of sequences, Infinite series, series of positive terms, Integral test, Comparison test, Ratio test, Root test. Alternating series, Absolute and Conditional Convergence, Leibnitz test. Power series: radius of convergence of power series, Taylor's and Maclaurin's Series, Formulae for remainder term in Taylor and Maclaurin series, Error estimates. (Scope as in Chapter 11, Sections 11.1 – 11.9 of Reference 1).

Integral Calculus: Areas of curves, Length of curves, Volume (disk and washer method) and surface areas of revolution (Scope as in Chapter 5, Sections 5.6, Chapter 6, 6.1, 6.3, 6.5 of Reference 1).

(11 hours)

Differential calculus of functions of two and three variables

Concept of limit and continuity of a function of two and three variables, Partial derivatives, total derivative, Euler's theorem for homogeneous functions, composite function, differentiation of an implicit function, chain rule, change of variables, Jacobian, Taylor's theorem, Errors and increments, Maxima and minima of a function of two and three variables, Lagrange's method of multipliers (Scope as in Chapter 14, Sections 14.1-14.4, 14.6-14.10 of Reference 1).

(10 hours)

SECTION-B

Integral calculus of functions of two and three variables

Double and triple integrals, change of order of integration, change of variables, applications to area, volume and surface area.

(Scope as in Chapter 15 of Reference 1).

(9 hours)

Vector differential calculus

Vector-valued functions and space curves, arc lengths, unit tangent vector, Curvature and torsion of a curve, Gradient of a Scalar field, Directional Derivative (Scope as in Chapter 13, Sections 13.1, 13.3-13.5 Chapter 14, Section 14.5 of Reference 1).

(8 hours)

Vector integral calculus

Line integrals, Vector fields, Work, Circulation and Flux, Path Independence, Potential functions and Conservative fields, Green's theorem in the plane, Surface Areas and Surface Integrals, Stoke's Theorem, Gauss Divergence Theorem (Statements only) (Scope as in Chapter 16 of Reference 1).

(7 hours)

RECOMMENDED BOOKS			
S. No.	NAME	AUTHOR(S)	PUBLISHER
1.	Calculus	Maurice D. Weir, Joel Hass, Frank R. Giordano, Thomas	11 th edition, Pearson Education.
2.	Advanced Engineering Mathematics	E. Kreyszig.	8th edition, John Wiley.
3.	Advanced Engineering Mathematics	Michael D. Greenberg	2 nd edition, Pearson Education.
4.	Advanced Engineering Mathematics	Wylie and Barrett	Tata McGraw Hill
5.	Higher Engineering Mathematics	B.V.Ramana	Tata McGraw Hill.
6.	Advanced Engineering Mathematics	R. K. Jain, S. R. K. Iyenger	Narosa Publications

Course Code	ME101
Course Title	Engineering Mechanics – I
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	Prior knowledge of integral and differential calculus and vector algebra
Course Objectives (CO)	The main objective of this course is to develop in the student the ability to analyze any engineering problem in a simple and logical manner with the help of free body diagrams and then to apply the basic principles of mechanics to solve the problem. The students should develop skills to apply equilibrium equations of statics to various problems to determine reactions and also could determine centre of gravity and moment of inertia of various bodies.
Course Outcome	The student can apply the principles of Engineering Mechanics to wide range of applications from Mechanical Engineering, Civil Engineering, Automotive Engineering to Medicine and Biology and can make use of the concept of free body diagrams and equilibrium equations in statics to solve practical engineering problems that are applicable to engineering design. At the end of the course students can determine centre of gravity and moment of inertia of any lamina which is required to solve practical engineering problems.

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

General Principles: Mechanics. Fundamental Concepts, Units of Measurement, The International System of Units, Numerical Calculations, General Procedure for Analysis.

Force Vectors: Scalars and Vectors, Vector Operations, Vector Addition of Forces, Addition of a System of Coplanar Forces, Cartesian Vectors, Addition and Subtraction of Cartesian Vectors, Position Vectors, Force Vector Directed Along a Line, Dot Product.

Equilibrium of a Particle: Condition for the Equilibrium of a Particle, the Free-Body Diagram, Coplanar Force Systems, Three-Dimensional Force Systems.

Force System Resultants: Cross Product, Moment of a Force - Scalar Formulation, Moment of a Force - Vector Formulation, Principle of Moments, Moment of a Force about a specific Axis, Moment of a Couple, Movement of a Force on a Rigid Body, Resultants of a Force and Couple System, Further reduction of a Force and Couple System, Reduction of a Simple Distributed Loading.

Equilibrium of a Rigid Body: Conditions for Rigid-Body Equilibrium, Equilibrium in Two Dimensions and Free-Body Diagrams, Equations of Equilibrium, Two-Force and Three-Force Members, Equilibrium in Three Dimensions, Free-Body Diagrams, Equations of Equilibrium, Constraints for a Rigid-Body.

Structural Analysis: Simple Trusses, The Method of Joints, Zero-Force Members, The Method of Sections, Space Trusses, Frames and Machines.

SECTION-B

Internal Forces: Internal Forces developed in Structural Members, Shear and Moment Equations and Diagrams, Relationships between Distributed Load and Shear and Moment, Cables.

Friction – Characteristics of Dry Friction, Problems Involving Dry Friction, Wedges, Rolling Resistance.

Center of Gravity and Centroid – Center of Gravity and Center of Mass for a System of Particles, Center of Gravity and Center of Mass and Centroid for a Body, Composite Bodies, Theorems of Pappus and Goldinus, Resultant of a General Distributed Force System,

Moments of Inertia – Definition of Moments of Inertia for Areas, Parallel-Axis Theorem for an Area, Radius of Gyration of an Area, Moments of Inertia for an Area by Integration, Moments of Inertia for Composite Areas, Product of Inertia for an Area, Moments of Inertia for and Area about Inclined Axes, Mohr's Circle for Moments of Inertia, Mass Moment of Inertia.

Virtual Work – Definition of Work and Virtual Work, Principle of Virtual Work for a Particle and a Rigid Body, Principle of Virtual Work for a System of Connected Rigid Bodies, Conservative Forces, Potential Energy.

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Engineering Dynamics	R.C. Hibbeler	Pearson
2.	Engineering Dynamics	F.P. Beer et al.	McGrawHill
3.	Engineering Dynamics	Merriam and Kraige	Wiley and Sons Publishers

Course Code	ME101
Course Title	Engineering Mechanics – I (Practical)
Type of Course	Core
Course Assessment Methods Internal Assessment (15-day to day work,20-viva,15-written test)	50
Course Prerequisites	Prior knowledge of integral and differential calculus and vector algebra
Course Objectives (CO)	To become science engineers, having thorough knowledge of mathematics and physical science, a broad grasp of the principles and methods of mechanics, and an ability to apply those fundamentals in practical situations.
Course Outcome	1)An ability to design and conduct experiments as well as to analyze and interpret data. 2)An ability to design a system ,component or a process to meet desired needs with realistic constraints such as economic, environmental, social ,political, ethical, health and safety, manufacturability and sustainability.

List of Experiments:

1. Fundamentals of Statics - Accumulation and resolution of forces with force Parallelogram.
2. Equilibrium of forces. Law of levers, determination of moments and equilibrium of moments
3. Inclined Plane and Friction - Dynamic friction as a function of the normal force, contact area and surface properties of the friction body. Determination of the friction coefficient. Rolling friction.
4. To verify the law of Moments using Parallel Force apparatus. (simply supported type)
5. To verify the law of moments using Bell crank lever.
6. Experimental and analytical study of a 3 bar pin jointed Truss
7. Forces in a Simple Bar Structure – Measurement and Calculation of bar forces by the method of joints. Comparison of measurement result and calculation also use graphical method
8. Equilibrium of Moments on a Two Arm Lever - Fundamentals of the equilibrium of moments: applied forces, generated moments and equilibrium. Action of forces dependent on the lever arm
9. Crank and Connecting Rod - conversion of smooth rotary motion into reciprocating motion
10. To find CG and moment of Inertia of an irregular body using Computation method.
11. Inertia in Rotational Motion - Determination of the moment of inertia of various bodies.

Course Code	ME105
Course Title	Introduction to Manufacturing Processes
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz) Practical (Continuous and end semester evaluation)	50 Nil 50
Course Prerequisites	Basic Workshop Practices
Course Objectives (CO)	<ol style="list-style-type: none"> 1. To know different machines, tools and equipment, Identify different Engineering materials, metals and non-metals. 2. To understand different Mechanisms, Use of Machines, Tools and Equipment. 3. Knowledge of basic Manufacturing Processes in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal.Smithy, Foundry and Carpentry Workshops.
Course Outcome	<ol style="list-style-type: none"> 1. Familiarity with common machines, Tools and Equipment in basic Workshop Practices. 2. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops in Engineering professions. 3. Applications of Basic Workshop Practices.

SYLLABUS

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly.

Practice of basic exercises related with different shops. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops in Engineering professions.

Welding Workshop :

(Theory) Joining Processes, Welding and its Classification, Welding Processes, Fusion Welding, Pressure Welding, Electric Arc Welding, Gas Welding, Resistance Welding, Metal Inert gas Welding, Welding Joints, Welding Positions, Welding defects, Welding Applications, Basic welding design and Procedures, identification of materials,

Jobs: Butt Joint in Flat Position using SMAW, Lap Joint using Spot Welding, Edge Joint in Horizontal Position using SMAW, Tee Joint in Flat position using SMAW, Corner Joint in vertical position using SMAW.

Defect Identification and marking, Edge preparation and Fillet making, Tacking, Distortion identification.

Electronics Workshop

To know about Soldering mechanism and techniques, Familiarity with Electronic Components / symbols, Testing of electronic components, Application of Soldering : Circuit Assembly

List of Jobs :

Practice of Soldering and de-soldering, Identification and testing of a) passive electronic components
b) Active electronic components, Assembly of Regulated Power supply circuit.

Electrical Workshop

Introduction of Various Electric wirings, Wiring Systems, Electrical wiring material and fitting, different type of cables, Conduit pipe and its fitting, inspection points, switches of all types, Distribution boards, M.C.B's etc., Electric Shock and its management.

Electric Tools: Conversance with various tools and to carry out the following:

- a) Measurement of wire sizes using SWG and micrometer
- b) Identification of Phase and neutral in single phase supply

Jobs:

To control a lamp with a single way switch

To control a lamp from two different places

To assemble a fluorescent lamp with its accessories

To control a lamp, fan and a three pin socket in parallel connection with single way switches

Fitting Shop

Introduction of Fitting, different type of operations, Tools, materials, precision instruments like Vernier caliper and Micrometer etc, Safety precautions and Practical demonstration of tools and equipments

Jobs:

To make a square from MS Flat, Punching, Cutting, Filling techniques and practice, Tapping, Counter Drilling.

Smithy Workshop

Introduction of Smithy and Forging process, Tools and Equipment's, Operations, Heat Treatment processes, Advantages, Dis-advantages, Defects and Safety precautions.

Jobs:

Drawing and Upsetting Practice using Open Hearth Furnace, Cold working process practice, Heat Treatment \: Annealing and hardening process

Machine Shop

Application, Function and different parts, Operations of Lathe, Type of Cutting Tools and their materials, Drill machine Types, applications and Functions. Hacksaw machines and functions, Work Holding devices and tools, chucks, Vices, machine Vices, V Block, Measuring Instruments uses, Shaper and Milling machine Applications.

Jobs:

To perform Marking, Facing, Turning, taper Turning, Grooving, Knurling, parting, Drilling, Reaming operations on lathe machine, Hacksawing practice on Power hacksaw, Shaping operation practice on Shaper.

Carpentry Shop

Classification of Tree, Timber. Advantages and uses of Timber, Seasoning of Wood, Tools Used, Defects and Prevention of Wood,

Jobs:

Tee Joint, Cross Joint, Tenon Joint, L Shape Joint, Practice of Wood Working Lathe, Practice on multi-purpose Planer.

Foundry Shop

Introduction to Foundry, Advantages and Disadvantages of castings process, Introduction to pattern and various hand tools, Ingredients of Green sands, Various Hand Molding processes, Introduction to Casting Defects.

Jobs:

Identification and uses of hand tools, Preparation of Green sand in Muller, Preparation of Sand Mould of Single piece solid pattern, Split pattern, Preparation of Green sand Core, casting of a Mould and study its defects.

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Introduction to Basic Manufacturing Processes and Workshop Technology	Rajender Singh	New Age International Publication
2	Manufacturing Processes	Chapman	Viva Books Private Limited

Students are required to make various jobs in the workshop based on theory studied in the subject.

Course Code	CH101 / CH201
Course Title	Applied Chemistry
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	10+2
Course Objectives (CO)	To teach the fundamentals of basic chemical sciences essential for the development of new technologies to all branches of engineering.
Course Outcome	1) Thermodynamics will help the students learn different thermodynamic laws, heat changes and energy calculations. 2) Studying catalysis will be beneficial to understand the role and mechanism of various heterogeneous and homogeneous catalysts in increasing reactions rate of many synthetically important chemical reactions. 3) By studying corrosion, the students will learn about basic nature and reasons of corrosion, its impact in many sectors of our lives. 4) Studying spectroscopy will help to understand the basic principles of spectroscopy and its use to determine chemical structures. 5) By studying coordination chemistry and CFT, explanation about different properties of coordination compounds will be given.

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Thermodynamics: Review of objectives and limitations of chemical thermodynamics, State functions, Thermodynamic equilibrium, work, heat, internal energy, enthalpy, heat capacity, Zeroth law of thermodynamics, First law of thermodynamics, Reversible, isothermal and adiabatic expansion & compression of an ideal gas. Irreversible isothermal and adiabatic expansion of an ideal gas. Carnot cycle and efficiency of reversible engines, Enthalpy change and its measurement. Flame temperature, Second and third law of thermodynamics. Concept of entropy. Gibb's and Helmholtz

equations. Simple numerical for calculating w , q , ΔE , ΔH and entropy.
(10 hours)

Catalysis: Catalysis and general characteristics of a catalytic reactions, homogeneous catalysis, kinetics of acid, base and enzyme catalysis – Michealis Menten equations. Heterogenous catalysis. Application of catalysis for industrially important processes– hydrogenation (Wilkinson’s catalyst), hydroformylation, acetic acid process and Wacker process. (6 hours)

Electrochemistry: Introduction to electrochemistry, types of electrodes, Ion selective electrodes, Reference electrodes, Fuel cells (hydrogen-oxygen, propane-oxygen, methanol-oxygen fuel cells), Corrosion: Types of corrosion, dry and wet corrosion and their mechanisms, types of electrochemical corrosion (galvanic, pitting, waterline, differential aeration, soil, microbiological, inter-granular, stress corrosion), Factors influencing corrosion, Prevention of corrosion. (8 hours)

SECTION - B

Polymer chemistry: Classification of polymers, Mechanism and methods of polymerisation, idea of number average and weight average molecular masses of polymers, preparation, properties and uses of polystyrene, polyester, polyamide, phenol-formaldehyde, silicones and epoxy resins. (5hours)

Spectroscopy: UV- Introduction, Lambert-Beer’s Law, selection rules, electronic transitions, Application to simple organic molecules (auxochrome, chromophore), effect of conjugation and solvent on transition of organic molecules, Woodward-Fieser Rules for calculating λ_{max} for dienes. IR- Introduction, Principle of IR spectroscopy-Fundamental vibrations, Application to simple organic molecules (effect of masses of atoms, bond strength, nature of substituent, hydrogen bonding on IR frequency), sample preparation for IR. (10 hours)

Coordination chemistry: Introduction, Crystal Field Theory, Splitting of octahedral, tetrahedral and square planar complexes, crystal field stabilization energies of octahedral and tetrahedral complexes and its applications. (6 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Organic Chemistry	Joseph M. Hornback Brooke	Cole Publishing Company U.S.A.
2.	Atkin’s Physical Chemistry	Peter Atkins, Julio de Paula	7 th Edition, Oxford University Press.
3.	Concise Inorganic Chemistry	J D Lee	Vth Edition, Chapman & Hall, 2003
4.	A Textbook of Engineering Chemistry	Shashi Chawla	Dhanpat Rai & Co. Pvt. Ltd
5.	Introductory Polymer Chemistry	G.S.Mishra	John Wiley & Sons, New York, 1993.
6.	Principles of Physical Chemistry	Puri, Sharma and Pathania	W.H. Freeman & Co, 2008.

7.	Introduction to spectroscopy	D. S. Pavia, G.M. Lasmpman and G.S. Kriz	4 th Edition, Thomson learning, Indian Edition 208.
8	Basic Inorganic Chemistry	F.A. Cotton, G. Wilkinson and P.L. Gaus	3rd Ed., John Wiley & Sons.

List of Experiments

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly and has to perform any eight experiments.

1. Volumetric analysis: Iodometric titrations, complexometric titrations, Acid-base titrations (conductometric), Precipitation titrations
2. Analysis of lubricants: Viscosity/surface tension/saponification value/acid value
3. Instrumental techniques for chemical analysis: Conductometry, potentiometry, UV-visible/IR spectrophotometer.
4. Preparation of few organic compounds/inorganic complexes/polymer.

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	A textbook of Quantitative Inorganic Analysis	A. I. Vogel	Longman Gp. Ltd, 4 th editon
2	Essentials of Experimental Engineering Chemistry	Shashi Chawla	Dhanpat Rai and Co. Delhi (2001)
3	Vogel's text book of quantitative chemical analysis	J. Mendham, R. C. Denny, J. D. Barnes and M. J. K. Thomas	Pearson Education

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Fundamentals of Communication Skills

Scope and Significance of Communication Skills, Listening, Speaking, Reading and Writing

(2 hours)

Writing Skills

Basics of Grammar – Word Order, Sentence Construction, Placing of Subject and Verbs, Parts of Speech, Use of Tenses, Articles, Prepositions, Phrasal Verbs, Active-Passive, Narration

(4 hours)

Vocabulary Building and Writing

Word Formations, Synonyms, Antonyms, Homonyms, One-Word Substitutes, Idioms and Phrases, Abbreviations of Scientific and Technical Words

(3 hours)

Speaking Skills

Introduction to Phonetic Sounds, English Phonemes, Stress, Rhythm and Intonation, Countering Stage Fright and Barriers of Communication

(3 hours)

Reading and Comprehension

(2 hours)

SECTION-B

Advanced Communication Skills

Scope, Significance, Process of Communication in an organization, Types and Levels, Communication Networks, Technical Communication, Tools of Effective Communication

(2 hours)

Speaking Skills and Personality Development

Interpersonal Communication, Presentation Skills, Body Language and Voice Modulation, Persuasion, Negotiation and Linguistic Programming, Public Speaking, Group Discussions, Interviews and Case Studies, Power Point Presentations, Relevant to the context and locale, Technical Presentations, Conducting, Meeting and Conferences

(5 hours)

Communication and Media

Social and Political Context of Communication, Recent Developments in Media

(1 hour)

Advanced Techniques in Speaking Skills

Importance of Listening/Responding to native and global accents, Telephonic Interviews and Video Conferencing

(2 hours)

Advanced Techniques in Technical Writing

Job Application, CV Writing, Business Letters, Memos, Minutes, Reports and Report Writing Strategies, E-mail Etiquette, Blog Writing, Instruction Manuals and Technical Proposals

(4 hours)

Practical Sessions

1. Individual presentations with stress on delivery and content
2. Overcoming Stage Fright - Debates, extempore
3. How to discuss in a group - Group Discussion
4. Discussion on recent developments and current debates in the media
5. How to prepare for an Interview and face it with confidence
6. Conducting meeting and conferences
7. Exercises on Composition & Comprehension, Reading Improvement

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

General: Introduction, components of the environment, environmental degradation. (4 hours)

Ecology: Elements of ecology: Ecological balance and consequences of change, principles of environmental impact assessment. (4 hours)

Air pollution and control: Atmospheric composition, energy balance, climate, weather, dispersion, sources and effects of pollutants, primary and secondary pollutants, green house effect, depletion of ozone layer, standards and control measures. (6 hours)

SECTION - B

Water pollution and control: Hydrosphere, natural water, pollutants their origin and effects, river/lake/ground water pollution, standards and control. (6 hours)

Land Pollution: Lithosphere, pollutants (municipal, industrial, commercial, agricultural, hazardous solid wastes): their origin and effects, collection and disposal of solid waste, recovery and conversion methods. (6 hours)

Noise Pollution: Sources, effects, standards and control. (6 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Introduction to Environmental Engineering and Science	C. M. Masters	Prentice Hall of India Pvt. Ltd., 1991
2.	Environmental Science	B. J. Nebel	Prentice Hall Inc., 1987

SECOND SEMESTER

Course Code	MATHS201
Course Title	Differential Equations and Transforms
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz)	50 50
Course Prerequisites	Calculus (MATHS101)
Course Objectives (CO)	<ol style="list-style-type: none">1.To learn the methods to formulate and solve linear differential equations and their applications to engineering problems2.To learn the concepts of Laplace transforms and to evaluate Laplace transforms and inverse Laplace transform3.To apply Laplace transforms to solve ordinary differential equations4.To learn the concept of Fourier series, integrals and transforms.5.To learn how to solve heat, wave and Laplace equations.
Course Outcome	<ol style="list-style-type: none">1. The student will learn to solve Ordinary Differential equations.2. The students will be able to apply the tools of Laplace Transforms to model engineering problems and solve the resulting differential equations.3. Students will understand the nature and behavior of trigonometric (Fourier) series and apply it to solve boundary value problems.

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION – A

Ordinary differential equations : Review of geometrical meaning of the differential equation, directional fields, exact differential equations(scope as in chapter 8, sections 8.1 – 8.10 of reference 2), solution of differential equations with constant coefficients; methods of differential operators (scope as in chapter 9, sections 9.1 – 9.5 of reference 2). Non-homogeneous equations of second order with constant coefficients: Solution by method of variation of parameters, reduction by order (scope as in chapter 9, section 9.7, 9.10 of reference 2). Power series method of solution(scope as in chapter 10, section 10.2 of reference 2)

(13 hours)

Laplace Transforms : Laplace transform, Inverse transforms, shifting, transform of derivatives and integrals. Unit step function, second shifting theorem, Dirac's Delta function. Differentiation and integration of transforms. Convolution Theorem on Laplace Transforms. Application of Laplace transforms to solve ordinary differential equations with initial conditions (Scope as in Chapter 5, Sections 5.1 – 5.5 of Reference 1).

(10 hours)

SECTION – B

Fourier Series and Transforms: Periodic functions, Fourier series, Even and odd series, half range expansions, Complex Fourier Series, Approximation by trigonometric polynomials. Fourier integrals, Fourier Cosine and Sine transforms, Fourier Transforms (Scope as in Chapter 10, Sections 10.1 – 10.5, 10.7 – 10.10 of Reference 1).

(8 hours)

Partial Differential Equations: Partial differential equations of first order, origin, solution of linear partial differential equations of first order, Integral surfaces passing through a given curve (Scope as in Chapter 2, Sections 1, 2, 4, 5 of Reference 4).

(6 hours)

Boundary Value Problems: D'Alembert's solution of wave equation, separation of variables: one dimension and two dimension heat and wave equation, Laplace equation in Cartesian and Polar coordinates (Scope as in Chapter 11, Sections 11.1, 11.3 – 11.5, 11.8 – 11.9 of Reference 1).

(8 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Elements of Partial Differential Equations	Ian N. Sneedon	McGraw Hill, Singapore 1957.
2.	Advanced Engineering Mathematics	E. Kreyszig.	8th edition , John Wiley.
3.	Advanced Engineering Mathematics	Michael D. Greenberg	2 nd edition, Pearson Education.
4.	Advanced Engineering Mathematics	Wylie and Barrett	Tata McGraw Hill
5.	Higher Engineering Mathematics	B.V.Ramana	Tata McGraw Hill.
6.	Advanced Engineering Mathematics	R. K. Jain, S. R. K. Iyenger	Narosa Publications
7.	Theory and problems of Differential Equations	Frank Ayers	Shuam outline series, McGraw-Hill, Singapore, 1957

Course Code	HSS 201 / HSS 101
Course Title	Ethics and Self Awareness
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Introduction to Ethics: Concept of Ethics – Nature, Scope, Sources, Types, Functions and Factors influencing Ethics, Approaches to Ethics – Psychological, Philosophical and Social, Broader Ethical Issues in Society. (6 hours)

Values, Norms, Standards and Morality: Concept and Role, Relation with Ethics, Psycho-Social Theories of Moral Development – Kohlberg and Carol Gilligan. (4 hours)

Ethics and Business

Concept of Business Ethics – Nature, Objectives and Factors influencing Business Ethics, 3 C's of Business Ethics, Ethics in Business Activities, Ethical Dilemmas in Business, Managing Ethics (5 hours)

SECTION – B

Self-Awareness: Concept of Self Awareness – Need, Elements, Self Assessment – SWOT Analysis, Self Concepts – Self-Knowledge, Assertiveness and Self-Confidence, Self-Esteem. (4 hours)

Self-Development : Concept of Self-Development, Social Intelligence, Emotional Intelligence, Managing Time and Stress, Positive Human Qualities (Self-Efficacy, Empathy, Gratitude, Compassion, Forgiveness and Motivation), Personality Development Models – Johari Window, Transactional Analysis, Myers Briggs Type Indicator, Self-Awareness and Self-Development Exercises. (11hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Business Ethics – Text and Cases	C.S.V. Murthy	Himalaya Publishing House
2.	Business Ethics	Hartman, Laura P. And Chatterjee, Abha	Tata McGraw Hill
3.	Business Ethics and Professional Values	A. B. Rao	Excel Books
4.	Business Ethics – Concepts and cases	Manuel G. Velasquez	Prentice Hall
5.	Issues and Ethics in the Helping Professions	G. Corey, M. Schneider Corey, P. Callanan	Brooks/Cole
6.	Theories of Personality	S. Calvin Hall, Dardner Lindzey and John B. Cambell	Hamilton Printing Company
7.	The Curse of Self-awareness, Egotism and the Quality of Human Life	M. R. Leary	Oxford University Press
8.	Self – Awareness	Allan Twain	

Physics Course 1

Any one of the following three papers to be chosen by institute

Course Code	APH 101 / APH 201
Course Title	Oscillations and Optics
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	10+2
Course Objectives (CO)

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

Ultrasonics: Production and detection of ultrasonics (2 hours)

SHM: Review of SHM, superposition of two SHM in one dimension, charge oscillations in LC circuits (3 hours)

Damped Oscillations: Concept and cause of damping, differential equation of a damped oscillator and different kinds of damping, Methods of describing damping of an oscillator - logarithmic decrement, relaxation time, quality factor, band width. Series LCR circuit as a damped oscillator. (3 hours)

Forced Oscillations: States of forced oscillations, differential equation of forced oscillator – its displacement, velocity and impedance, behaviour of displacement and velocity with driver's frequency, Power, bandwidth, Quality factor and amplification of forced oscillator, resonance in forced oscillators, forced oscillations in series LCR circuit (4 hours)

Wave Motion: Wave equation and its solution, characteristic impedance of a string, reflection and transmission of waves on a string at a boundary, reflection and transmission of energy, the matching of impedances (3 hours)

SECTION – B

Interference: Division of wave front and amplitude; Fresnel's biprism, Newton's rings, Michelson interferometer and its applications for determination of λ and $d\lambda$. (4 hours)

Diffraction: Fresnel and Fraunhofer diffraction, qualitative changes in diffraction pattern on moving from single slit to double slit, plane transmission grating, dispersive power & resolving power of a grating. (5 hours)

Polarization: Methods of polarization, analysis of polarized light, quarter and half wave plates, double refraction. (4 hours)

Lasers: Elementary idea of LASER production, spontaneous emission, stimulated emission, Einstein's coefficients, Helium-Neon, Ruby and semiconductor lasers, applications of lasers. (4 hours)

Fibre Optics: Basics of optical fibre - its numerical aperture, coherent bundle, step index and graded index fibre, material dispersion, fibre Optics sensors, applications of optical fibre in communication systems. (3 hours)

Holography: Basic principle, theory and requirements, applications (2 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Physics for Engineers	N. K. Verma	Prentice Hall India
2.	Physics of Vibrations and Waves	H. J. Pain	5 th edition, John Wiley & Sons
3.	Vibrations and Waves	A. P. French	CBS Publishers
4.	Optics	Ajoy Ghatak	McGraw Hill Publications

List of Experiments

1. To study Lissajous figures obtained by superposition of oscillations with different frequencies and phases.
2. To find the wavelength of sodium light using Fresnel's biprism.
3. (i) To determine the wavelength of He-Ne laser using transmission grating.
(ii) To determine the slit width using the diffraction pattern.
4. To determine the wave length of sodium light by Newton's rings method.
5. To determine the wave length of sodium light using a diffraction grating.
6. To find the specific rotation of sugar solution using a Bi-quartz Polarimeter.
7. To design a hollow prism and used it find the refractive index of a given liquid.
8. To determine the wavelength of laser using Michelson interferometer.

Course Code	APH 103 / APH 203
Course Title	Quantum and Statistical Physics
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50

Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

Special Theory of Relativity: Inertial and non-inertial frames of reference, Galilean transformation, Michelson Morley Experiment, postulates of special theory of relativity, Lorentz transformation, Simultaneity, Length contraction, Time dilation, Doppler effect, Addition of velocities, variation of mass with velocity, mass-energy relation . (7 hours)

Origin and Postulates of Quantum Physics: Quantum theory of light, X-rays production, spectrum & diffraction (Bragg's law), photoelectric effect, Compton effect, pair production, photons & gravity, black holes, de-Broglie hypothesis, particle diffraction, uncertainty principle and applications (7 hours)

Postulates of quantum mechanics, Schrodinger theory, time-dependent and time-independent Schrodinger equation, wave function, Born interpretation and normalization, expectation values (3 hours)

SECTION - B

Applications of Quantum Physics: Particle in a box (infinite potential well), finite potential step and barrier problems, tunneling, linear harmonic oscillator (one-dimensional). (4 hours)
Hydrogen atom (qualitative), radiative transitions and selection rules, Zeeman effect, Spin-orbit coupling, electron spin, Stern-Gerlach experiment, exclusion principle, symmetric and antisymmetric wavefunctions (5 hours)

Statistical Physics: Maxwell-Boltzmann statistics, molecular energies in an ideal gas, Bose-Einstein and Fermi-Dirac statistics, black body radiation, Rayleigh-Jeans and Planck's radiation laws, free electrons in a metal, electron-energy distribution, Fermi energy, electronic specific heat, conduction in metals, thermionic emission. (10 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Concepts of Modern Physics	Arthur Beiser	McGraw Hill Publications
2.	Solid State Physics	C. Kittel	Wiley Eastern Publications
3.	Solid State Physics	S. O. Pillai	New Age International
4.	Statistical Physics Thermodynamics	V. S. Bhatia	

List of Experiments

- 1) To study the quantized energy level of the first excited state in the Argon using the Frank-Hertz setup.
- 2) To find the value of Planck's constant and evaluate the work function of cathode material by used of photoelectric cell.
- 3) To study various characteristics of photo-voltaic cell: (a) Voltage-current characteristics, (b) loading characteristics, (c) power-resistance characteristics and (d) inverse square law behavior of the photo-current with distance of source of light from photo-voltaic cell
- 4) To study the response of a photo-resistor to varying intensity of light falling on it and deduce spectral sensitivity of its semiconductor material.
- 5) To study the Balmer Series of Mercury and Hydrogen spectrum using diffraction grating and calculate Rydberg constant.
- 6) To evaluate charge on an oil drop using Millikan's oil drop method.
- 7) To verify Rutherford's alpha scattering formula using a mechanical model.

Course Code	APH 107 / APH 207
Course Title	Physics of Materials
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	10+2
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Crystal structure: Bonding forces and energies, Primary and Secondary bonds, Space Lattices, Symmetries in a cubic lattice, Crystal Structures (cubic and hexagonal cells), Assignment of coordinates, directions and planes in crystals, Linear, Planar and Space densities in crystals, close packed morphology (Hexagonal and cubic close packing), single and polycrystalline structures, interstitial spaces (trigonal, tetrahedral and octahedral voids)

Structure of ceramics (NaCl, Zinc blende, silica and silicates, diamond crystal, Graphite, Fullerenes and carbon nanotubes)

Structure of polymers, crystallinity of long chain polymers

Crystal Structure analysis, X-ray diffraction and Bragg's law, Powder method for study of X-ray diffraction pattern

Crystal Defects (Point, line, surface and volume imperfections) (14 hours)

Diffusion: Diffusion mechanisms, steady state diffusion, non-steady state diffusion, factors affecting diffusion, applications based on diffusion (corrosion resistance of Duralumin, carburization of steel, decarburization of steel, doping of semiconductors) (3 hours)

Elastic, Anelastic and Viscoelastic Behaviour Elastic behaviour and its atomic model, rubber like elasticity, anelastic behaviour, relaxation processes, viscoelastic behaviour, spring-dashpot model (3 hours)

SECTION - B

Plastic Deformations and strengthening mechanisms : Tensile properties (Yield strength, Tensile Strength, Ductility, Resilience, Toughness), Dislocations and plastic deformation, characteristics of dislocations, slip systems, slip in single crystals, plastic deformation of polycrystalline materials, mechanisms of strengthening in metals (grain size reduction, solid-solution strengthening, strain hardening), recovery, recrystallization and grain growth (5hours)

Fracture, Fatigue and Creep : Fracture (Ductile and brittle fractures), principles of fracture mechanics, fracture toughness, ductile to brittle transitions Cyclic stresses, S-N curve, crack initiation and propagation, factors that affect fatigue life, environmental effects, generalized creep behavior, stress and temperature effects. (5 hours)

Phase Diagrams : One-Component (or Unary) Phase Diagrams, Binary Isomorphous Systems, Interpretation of Phase Diagrams, Development of Microstructure in Isomorphous Alloys, Mechanical Properties of Isomorphous Alloys ,Binary Eutectic Systems, Development of Microstructure in Eutectic Alloy, Equilibrium Diagrams Having Intermediate Phases or Compounds, Eutectic and Peritectic Reactions, The Gibbs Phase -Rule (6 hours)

Phase Transformations: Kinetics of phase transformation, kinetics of solid state reactions, Isothermal transformation diagrams, continuous cooling transformation, temper embrittlement (4 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Material science and engineering – An Introduction	William D Callister	6 Th edition, John Willey and Sons.
2.	Material Science and Engineering – A First Course	V. Raghvan	4 th edition, Eastern economy edition
3.	Solid State Physics	S. O. Pillai	New Age International
4.	Introduction to Solids	Leonid V Azaroff	Tata McGraw Hill, 3 rd edition.

List of Experiments

1. To find the energy band gap of the given semiconductor by four probe method.
2. To study the Hall Effect of a given semiconductor.
3. To determine the dielectric constant of the given materials.
4. To study the B-H curve of the ferromagnetic materials.
5. To determine the value of e/m for electron by long solenoid (helical) method.
6. To study the variation of magnetic field with distance along the axis of a circular coil carrying current by plotting a graph.
7. To find the Curie temperature of a Ferroelectric material by measuring Capacitance as a function of temperature.
8. To determine the thermal conductivity of an insulator material using guarded plate method (Lee's disc method).
9. To Study (a) Voltage-current characteristics (b) loading characteristics (c) Power-Resistance characteristics and (d) intensity response of photovoltaic cell.

Course Code	ME201
Course Title	Engineering Mechanics – II
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	Prior knowledge of integral and differential calculus and vector algebra
Course Objectives (CO)	The main objective of this course is to develop in the student the ability to analyze any engineering problem in a simple and logical manner with the help of free body diagrams and then to apply the basic principles of mechanics to solve the problem.
Course Outcome	The student can apply the principles of Engineering Mechanics to wide range of applications from Mechanical Engineering, Civil Engineering, Automotive Engineering to Medicine and Biology and can make use of the concept of free body diagrams to solve practical engineering problems that are applicable to engineering design.

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Kinematics of a Particle: Introduction. Rectilinear Kinematics: Continuous Motion. Rectilinear Kinematics: Erratic Motion. General Curvilinear Motion. Curvilinear Motion: Rectangular Components. Motion of a Projectile. Curvilinear Motion: Normal and Tangential Components. Curvilinear Motion: Cylindrical Components. Absolute Dependent Motion Analysis of Two Particles. Relative-Motion Analysis of Two Particles Using Translating Axes.

Kinetics of a Particle: Force and Acceleration - Newton's Laws of Motion. The Equation of Motion. Equation of Motion for a System of Particles. Equations of Motion: Rectangular Coordinates. Equations of Motion: Normal and Tangential Coordinates. Equations of Motion: Cylindrical Coordinates. Central-Force Motion and Space Mechanics.

Kinetics of a Particle: Work and Energy - The Work of a Force. Principle of Work and Energy. Principle of Work and Energy for a System of Particles. Power and Efficiency. Conservative Forces and Potential Energy. Conservation of Energy.

Kinetics of a Particle: Impulse and Momentum - Principle of Linear Impulse and Momentum. Principle of Linear Impulse and Momentum for a System of Particles. Conservation of Linear Momentum for a System of Particles. Impact. Angular Momentum. Relation Between Moment of a Force and Angular Momentum. Angular Impulse and Momentum Principles. Steady Fluid Streams. Propulsion with Variable Mass.

Planar Kinematics of a Rigid Body - Rigid-Body Motion. Translation. Rotation About a Fixed Axis. Absolute General Plane Motion Analysis. Relative-Motion Analysis: Velocity. Instantaneous Center of Zero Velocity. Relative-Motion Analysis: Acceleration. Relative-Motion Analysis Using Rotating Axes.

SECTION- B

Planar Kinetics of a Rigid Body: Force and Acceleration - Moment of Inertia. Planar Kinetic Equations of Motion. Equations of Motion: Translation. Equations of Motion: Rotation About a Fixed Axis. Equations of Motion: General Plane Motion.

Planar Kinetics of a Rigid Body: Work and Energy - Kinetic Energy. The Work of a Force. The Work of a Couple. Principle of Work and Energy. Conservation of Energy.

Planar Kinetics of a Rigid Body: Impulse and Momentum - Linear and Angular Momentum. Principle of Impulse and Momentum. Conservation of Momentum. Eccentric Impact.

Three-Dimensional Kinematics of a Rigid Body: Rotation About a Fixed Point. The Time Derivative of a Vector Measured from a Fixed and Translating-Rotating System. General Motion. Relative-Motion Analysis Using Translating and Rotating Axes.

Three-Dimensional Kinetics of a Rigid Body: Moments and Products of Inertia. Angular Momentum. Kinetic Energy. Equations of Motion. Gyroscopic Motion. Torque-Free Motion.

Vibrations: Undamped Free Vibration. Energy Methods. Undamped Forced Vibration. Viscous Damped Free Vibration. Viscous Damped Forced Vibration. Electrical Circuit Analogs.

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Engineering Dynamics	R.C. Hibbeler	Pearson
2.	Engineering Dynamics	F.P. Beer et al.	McGrawHill
3.	Engineering Dynamics	Merriam and Kraige	Wiley and Sons Publishers

List of Experiments

1. Wheel and Axle - Demonstration of the formation of an equilibrium of moments in static systems
2. Determination of parameters of System of pulleys.
3. To determine the mechanical advantage, Velocity ratio and efficiency of a screw jack.
4. Determine the mechanical advantage, Velocity ratio and Mechanical efficiency of Wheel and Axle.
5. To determine the MA, VR of Worm Wheel (double-start)

6. To find the time period of a simple and compound pendulum.
7. To calculate the mass moment of inertia and radius of gyration of the compound pendulum of two bodies different in shapes and compare them to the theoretical values.
8. To study various types of gears – Helical, Cross helical, Worm, Bevel gear.
9. To Study various types of gear trains – Simple, Compound, reverted, Epicyclic and Differential.
10. To obtain by experiment the velocity ratios of a simple or a compound train of gears and to verify calculated values.

Course Code	ME202
Course Title	Engineering Graphics
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz) Practical (Continuous and end semester evaluation)	Nil 50 50
Course Prerequisites	
Course Objectives (CO)	<ol style="list-style-type: none"> 1. Learn basic engineering drawing formats 2. Learn to sketch and take field dimensions 3. Learn basic Auto Cad skills
Course Outcome	<ol style="list-style-type: none"> 1. The students will able to draw orthographic, isometric projections and sections 2. Students will become familiar with Auto Cad, two dimensional drawings 3. The students will able to read drawings

SYLLABUS

Introduction to Engineering Graphics, Methods of projections, Theory of orthographic projection.
 Introduction to CAD software
 Conventional practices, dimensioning as per BIS SP 46-1988
 Pictorial sketching
 Projection of points, lines and planes on principal planes
 Projection on auxiliary planes
 Projection of solids, solid modeling
 Section of solids
 Elementary development and intersection of solids
 General introduction to isometric views
 Applications: Drawing of threaded fasteners, Electrical and Electronic drawings using first angle projection

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	AutoCAD	James D. Bethune	Pearson Publishers
2.	A textbook of engineering Drawing	R. K.Dhawan	S. Chand & Co. Ltd.
3.	Understanding AutoCAD 2006	Sham Tickoo	Wiley Publication

List of Experiments

The candidates will be required to make various drawing sheets covering syllabus of Engineering Graphics (ME202) using the software such as AutoCAD.

Course Code	ME 204
Course Title	Computer Programming (MATLAB Programming for Engineers)
Type of Course	Core
Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz) Practical (Continuous and end semester evaluation)	50 50 50
Course Prerequisites	No specific prerequisites are needed. It is advisable to have a have a good familiarity with PC operations and a working knowledge of some basic application software (Excel). Basic knowledge of computer programming and an understanding of matrix and linear algebra are highly beneficial.
Course Objectives (CO)	The course provides a gentle introduction to the MATLAB computing environment, and is intended for beginning users and those looking for a review. It is designed to give students a basic understanding of MATLAB, including popular toolboxes. The course consists of lectures and sample MATLAB problems given as assignments and discussed in class. No prior programming experience or knowledge of MATLAB is assumed. Concepts covered include basic use, graphical representations and tips for designing and implementing MATLAB code. The main objectives are: understanding the MATLAB environment; being able to do simple calculations using MATLAB; being able to carry out simple numerical computations and analyses using MATLAB.
Course Outcome	Upon successful completion of this course, the student should be able to: understand the main features of the MATLAB development environment; use the MATLAB GUI effectively; design simple algorithms to solve problems; write simple programs in MATLAB to solve scientific and mathematical problems; know where to find help.

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

Introduction: Introduction to basic features of Matlab and Matlab desktop. (2 hours)

Basic Programming Operations: Script M-files, Arrays and array operations, Multidimensional arrays, Numeric data types, Cell arrays and structures, Character strings, Relational and logical operations, Control flow. (6 hours)

Advance Programming Operations: Functions, M-file debugging and profiling, File and directory management, Set, bit and base functions, Time computations. (6 hours)

Basic Mathematical Applications: Matrix Algebra, Data analysis, Data interpolation, Polynomials, Cubic splines. (6 hours)

SECTION-B

Advance Mathematical Applications: Fourier analysis, Optimization, Integration, Differentiation, Differential equations. (5 hours)

Basic Graphical Operations: Two-dimensional graphics, Three-dimensional graphics, Use of colors and light in graphics, Generation of images. (5 hours)

Advance Graphical Operations: Development of movies and sounds, Printing and exporting graphics, Handling graphics, Development of graphical user interfaces. (5 hours)

Classes and Interfacing: Matlab classes and Object-Oriented Programming, Matlab programming interfaces. (5 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Mastering MATLAB 7	D. Hanselman and B. Littlefiels	Pearson Education, New Delhi, 2009
2.	Getting started with Matlab: A quick introduction for scientists and engineers	Rudra Pratap	Oxford University Press, USA, 2009.
3.	Programming in MATLAB for Engineers	Chapman Stephen J.	Cengage Learning, New Delhi, 2009.

4.	MATLAB An Introduction with Applications	Amos Gilat	John Wiley and Sons, New Delhi, 2009
5.	Essential Matlab for Engineers and Scientists	Brian HHahn	Elsevier India
6.	Matlab: A practical Introduction To Programming	Attaway	Elsevier India

Course Code	ME 204
Course Title	Computer Programming (MATLAB Programming for Engineers)
Type of Course	Core
Course Assessment Methods Continuous Assessment: 50 marks (25 day to day work, 25 assignments)	50
Course Prerequisites	No specific prerequisites are needed. It is advisable to have a have a good familiarity with PC.
Course Objectives (CO)	The course provides a gentle introduction to the MATLAB computing environment. It is designed to give students a basic understanding of MATLAB, including popular toolboxes. The main objectives are: understanding the MATLAB environment; being able to do simple calculations using MATLAB; being able to carry out simple numerical computations and analyses using MATLAB.
Course Outcome	Upon successful completion of this course, the student should be able to: understand the main features of the MATLAB development environment; use the MATLAB GUI effectively; design simple algorithms to solve problems; write simple programs in MATLAB to solve scientific and mathematical problems; know where to find help.

List of Experiments

1. Basics such as command window, workspace, m-files, clc, clear, who, save, load, format,,if, else, switch, for, while, continue, break, try, catch, return, ctrl+C, entering matrices, transpose, subscripts, colon operator, modifying or deleting rows and columns, addition, subtraction, matrix multiplication, element-by-element multiplication / division / left-division, sum, diag, eye, zeros, ones, rand, randn, det, inv, variables, numbers, strings, numeric operators, relational operators, functions.
2. 2-D and 3-D plotting. Modifying graph properties such as title, labels, limits, colors, line-types, line-weights, lights etc. using graphic handles. Exporting graphs as TIFF, PDF and JPEG files.
3. Application of matrix inversion in solving a system of simultaneous linear equations. Measurement of time consumed in solving the problem.
4. Curve fitting and simple regression analysis of some simulated data.
5. Use of FFT method to find the frequency components of a signal buried in a noisy time domain signal.

6. Solution of a multi-variable optimization problem.
7. Differentiation and integration of a function using symbolics.
8. Solution of an ordinary differential equation and development of a corresponding GUI.

						Internal Assessment	University Exam	
1.	IPD201	Innovative product design	0-0-20	20	0+2	Nil	Nil	50

Note: Students will undergo four week in-house training during summer vacations in their respective branches. They will be trained to handle laboratory and practical aspects in their field of engineering.

The marks and credits of Innovative product design (IPD201) will be added in the second semester mark-sheet.

* Practical marks are for continuous and end semester evaluation

SEMESTER I

Course Code	MATHS101
Course Title	Calculus
Type of Course	Core
Course Assessment Methods End Semester Assessment (University Exam) Continous Assessment (Sessional, Assignments, Quiz)	50 50
Course Prerequisites	10+2
Course Objectives (CO)	<ol style="list-style-type: none">1. To understand the behavior of infinite series and its use.2. To learn the concepts of functions of two and more than two variables and their applications.3. To learn the methods to evaluate multiple integrals and their applications to various problems.4. To understand the concepts of Vector calculus and their use in engineering problems.
Course Outcome	<ol style="list-style-type: none">1. The students are able to test the behaviour of infinite series.2. Ability to analyze functions of more than two variables and their applications.3. Ability to evaluate multiple integrals and apply them to practical problems.4. Ability to apply vector calculus to engineering problems

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION-A

FUNCTIONS OF ONE VARIABLE

Sequences and Series: Sequences, Limits of sequences, Infinite series, series of positive terms, Integral test, Comparison test, Ratio test, Root test. Alternating series, Absolute and Conditional Convergence, Leibnitz test. Power series: radius of convergence of power series, Taylor's and Maclaurin's Series, Formulae for remainder term in Taylor and Maclaurin series, Error estimates. (Scope as in Chapter 11, Sections 11.1 – 11.9 of Reference 1).

Integral Calculus: Areas of curves, Length of curves, Volume (disk and washer method) and surface areas of

revolution (Scope as in Chapter 5, Sections 5.6, Chapter 6, 6.1, 6.3, 6.5 of Reference 1). (11 hours)

DIFFERENTIAL CALCULUS OF FUNCTIONS OF TWO AND THREE VARIABLES

Concept of limit and continuity of a function of two and three variables, Partial derivatives, total derivative, Euler's theorem for homogeneous functions, composite function, differentiation of an implicit function, chain rule, change of variables, Jacobian, Taylor's theorem, Errors and increments, Maxima and minima of a function of two and three variables, Lagrange's method of multipliers (Scope as in Chapter 14, Sections 14.1-14.4, 14.6-14.10 of Reference 1). (10 hours)

INTEGRAL CALCULUS OF FUNCTIONS OF TWO AND THREE VARIABLES

Double and triple integrals, Change of order of integration, Change of Variables, Applications to area, volume and surface area.(Scope as in Chapter 15 of Reference 1). (9 hours)

VECTOR DIFFERENTIAL CALCULUS

Vector-valued functions and space curves, arc lengths, unit tangent vector, Curvature and torsion of a curve, Gradient of a Scalar field, Directional Derivative (Scope as in Chapter 13, Sections 13.1, 13.3-13.5 Chapter 14, Section 14.5 of Reference 1). (8 hours)

VECTOR INTEGRAL CALCULUS

Line integrals, Vector fields, Work, Circulation and Flux, Path Independence, Potential functions and Conservative fields, Green's theorem in the plane, Surface Areas and Surface Integrals, Stoke's Theorem, Gauss Divergence Theorem (Statements only) (Scope as in Chapter 16 of Reference 1). (7 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Calculus	Maurice D. Weir, Joel Hass, Frank R. Giordano, Thomas	11 th edition, Pearson Education.
2.	Advanced Engineering Mathematics	E. Kreyszig.	8th edition, John Wiley.
3.	Advanced Engineering Mathematics	Michael D. Greenberg	2 nd edition, Pearson Education.
4.	Advanced Engineering Mathematics	Wylie and Barrett	Tata McGraw Hill
5.	Higher Engineering Mathematics	B.V.Ramana	Tata McGraw Hill.
6.	Advanced Engineering Mathematics	R. K. Jain, S. R. K. Iyenger	Narosa Publications

Course Code	CIV101
Course Title	Introduction to Civil Engineering
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Course Prerequisites	
Course Objectives (CO)	
Course Outcome	

SYLLABUS

Note for the examiner: A total of eight questions will be asked covering the whole syllabus. Candidate will be required to attempt any five questions.

Introduction to Civil Engineering

Civil engineering and basic human needs, Role of Civil Engineer in infrastructure development Branches of civil engineering.

Surveying

Objectives – Principles – Classification –Uses for Surveying, Chain Surveying, Compass Surveying, Leveling – objectives ,principles, instruments and uses. Modern Tools of Surveying and Mapping: Introduction to Theodolite , Total Station, Global Positioning System, Remote Sensing and Geographic Information System.

Building Materials and their properties

Introduction to Brick, Stone, Lime, Mortar, Cement, Steel, Concrete – Composition, Properties and Uses.

Building Construction and Planning

Buildings – Classification –Requirements of buildings, Components of buildings and their functions. Foundations functions and types, Dampness, Doors and windows (Location and sizes),types of roofs, types of stairs. Elementary principles and basic requirements of a building planning.

Structural Engineering

Classification and Components of a structure, behavior, Types of loads, Bureau of Indian Standards Codes, Introduction to Reinforced Concrete Design and Steel structure Design.

Transportation System

Importance of Transportation, Different modes of transportation system. Roads-Road Patterns, Types of

Roads and components and their cross-sections. Railway – Cross-section of permanent way- components parts and functions. Aircraft Characteristics, Factors for Site Selection, Airport Classification, General Layout of an Airport. Docks and Harbour classification, Bridges components of a bridge - types of bridges.

Geotechnical Engineering

Types of Rocks, Types of soils, Mechanism of soil formation, Important terminologies.

Hydraulics and Water Resource Development

Introduction to Hydrology, Importance of hydrological data in water resources planning. The hydrologic cycle, Water budget equation, Introduction to diversion headworks, Dams - Purpose, Selection of site, Water logging.

Water Supply/ Sewage disposal

Sources and Standards of drinking water (BIS), water treatment components and functions, Testing of sewage, sewage treatment components and functions.

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Basic Civil Engineering	Rakesh Beohar	University Press Science
2.	Engineering Materials	S. C. Rangwala	Charotar Publishing House, Delhi
3.	Hydraulic and Fluid Mechanics	Modi and Seth	Standard Book House, Delhi
4.	Surveying Vol. I & II	B. C. Punmia	Laxmi Publications
5.	Highway Engineering	S. K. Khanna and C. E. G. Justo	Nem Chand and brothers
6.	Irrigation and Water Power Engineering	B. C. Punia	Laxmi Publications
7.	Soil Mechanics and Foundation Engineering	B. C. Punia	Laxmi Publications
8.	Building Construction	B. C. Punia	Laxmi Publications
9.	Water Supply and waste water Engineering	S. K. Gard	Khanna Publishers, Delhi

Course Code	CS101
Course Title	Programming Fundamentals
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	
Course Objectives (CO)	To get basic knowledge of computers, its components and Operating systems and Linux. Shell Commands.
Course Outcome	

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Introduction

Introduction to Programming Languages, Flowcharts, Algorithms, System Software (Assembler, Compiler, Translator, Debugger), Program Structure. (5 hours)

Basic Constructs of C

Keywords, Identifiers, Variables, Symbolic Constants, Data Types and their storage, Operands, Arithmetic Operators, Relational Operators, Logical Operators, Bitwise Operators, Increment & Decrement Operators,

Expressions, Conditional Expressions, Assignment Operators and Expressions, Type Conversions, Precedence and Order of Evaluation, External Variables and Scope of Variables. Basic Input Output, Formatted I/O.

(7 hours)

Program Control Flow

Statements and Blocks, Conditional Statements, IF, ELSE-IF, Switch Case statements, Control Loops, For, While and Do-While, Go to and Labels.

(7

hours)

Arrays & Functions

Arrays, Multi dimensional arrays, strings, pointer arrays, Functions, Function Prototyping, Scope of functions, Arguments, Call by value and call by references, static variables, recursion.

(7

hours)

SECTION - B

Structures

Structures, Array of Structures, Typedef, Unions, Bit fields, passing structures as an argument to functions , C-Pre-processor and Macros, Command line arguments.

(6

hours)

Pointers

Pointer declaration, initialization, Pointer arithmetic, Pointer to array and Pointer to structure.

(6 hours)

Input and Output

Standard and Formatted Input and Output, File Access & its types, Line Input and Output, Types of Files, Binary & ASCII Files, Error handling, stderr and exit functions.

(7

hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	The C Programming language	Brian Kernighan and	Prentice Hall, 2 nd editon, 2007

2.	Fundamentals of Information Technology and Computer Programming	Dennis M. Ritchie V. K. Jain	PHI. Latest edition
3.	C Programming: A Modern Approach	K. N. King	W. W. Norton Company 2 nd editon (2008)
4.	C : The Complete Reference	Herbert Schildt	Tata McGraw Hill Publications, 4 th editon
5.	Let us C++	Yashwant Kanetkar	BPB Publications
6.	Programming in ANSI C++	E. Balagurusamy	TMH publications, 4 th edition, Reprint(2008)
7.	Programming in ANSI C	Gottfried	Schaum Series, TMH publications, 2 nd edition(1996)

List of Experiments

Instruction for Students: The candidate will be attending a laboratory session of 2 hours weekly and students have to perform the practical related to the following list.

- 1.Introduction to basic structure of C program, utility of header and library files.
- 2.Implementation of program related to the basic constructs in C
- 3.Program using different data types in C
- 4.Programs using Loops and Conditional Statements in C
- 5.Programs using arrays single dimension and multi dimensions in C.
- 6.Implementation of Matrices and their basic functions such as addition, subtraction, multiplication, inverse.
- 7.Programs using functions by passing values using call by value and call by reference method
- 8.Programs related to structures and unions
- 9.Program to implement array using pointers
10. Programs related to string handling in C
11. Program to manage I/O files and Pointers

Course Code	APH105
Course Title	Mechanics
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Practical (Continuous and end semester evaluation)	50
Course Prerequisites	
Course Objectives (CO)	To get basic knowledge of kinematics, types of oscillations and theory of relativity.
Course Outcome	

SYLLABUS

Note for the paper setter: Total of 8 questions be set with 4 from part A and four from part B. Candidate will be required to attempt any 5 questions with at least two questions from each part.

Simple Harmonic Motion

Review of basic kinematics (displacement, velocity, acceleration, time period and phase of vibration) and dynamics (restoring force and energetics) of simple harmonic motion, differential equation of SHM, superposition of two SHM in one dimension, charge oscillations in LC circuits.

(4 hours)

Damped Oscillations

Concept and cause of damping, differential equation of a damped oscillator and different kinds of damping, Methods of describing damping of an oscillator - logarithmic decrement, relaxation time, quality factor, band width. Series LCR circuit as a damped oscillator.

(5 hours)

Forced Oscillations

States of forced oscillations, differential equation of forced oscillator – its displacement, velocity and impedance, behaviour of displacement and velocity with driver's frequency, Power, bandwidth, Quality factor and amplification of forced oscillator, resonance in forced oscillators, forced oscillations in series LCR circuit

(5 hours)

Coupled Oscillations

Basic idea of coupled oscillators, Stiffness coupled oscillators and inertia coupled oscillators, normal coordinates, degrees of freedom and normal modes of vibrations

(5 hours)

Motion under inverse square force

Force between a Point Mass and Spherical shell. Force between a Point Mass and Solid Sphere, Gravitational and Electrostatic self-energy. Gravitational energy of the Galaxy and of uniform sphere; Orbits and their eccentricity, Two-body problem - reduced mass. (7 hours)

Special Theory of Relativity

Inertial and non-inertial frames of reference, Galilean transformation, Michelson Morley Experiment, postulates of special theory of relativity, Lorentz transformation, Simultaneity, Length contraction, Time dilation, Doppler effect, Addition of velocities, variation of mass with velocity, mass-energy relation, four vectors, space-time continuum. (9 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Physics of Vibrations and Waves	H. J. Pain	5 th edition, John Wiley & Sons
2.	Mechanics	Hans and Puri	

List of Experiments

- 1.To find the moment of inertia of a flywheel.
- 2.To determine the value of acceleration due to gravity at a place with kater's pendulum.
- 3.To determine the velocity of ultrasonics waves in a given liquid.
- 4.To determine the requencey of A.C. mains using a sonometer and an electro-magnet.
- 5.To find the capacitance of a capacitor using flashing and quenching of a neon lamp.
- 6.To plot graph between current and frequency in a series LCR circuit and to find the resonant frequency.

Course Code	HSS 101 / HSS 201

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Introduction to Ethics

Concept of Ethics – Nature, Scope, Sources, Types, Functions and Factors influencing Ethics, Approaches to Ethics – Psychological, Philosophical and Social, Broader Ethical Issues in Society. (6 hours)

Values, Norms, Standards and Morality

Concept and Role, Relation with Ethics, Psycho-Social Theories of Moral Development – Kohlberg and Carol Gilligan (4 hours)

Ethics and Business

Concept of Business Ethics – Nature, Objectives and Factors influencing Business Ethics, 3 C's of Business Ethics, Ethics in Business Activities, Ethical Dilemmas in Business, Managing Ethics (5 hours)

SECTION – B

Self-Awareness

Concept of Self Awareness – Need, Elements, Self Assessment – SWOT Analysis, Self Concepts – Self-Knowledge, Assertiveness and Self-Confidence, Self-Esteem (4 hours)

Self-Development

Concept of Self-Development, Social Intelligence, Emotional Intelligence, Managing Time and Stress, Positive Human Qualities (Self-Efficacy, Empathy, Gratitude, Compassion, Forgiveness and Motivation), Personality Development Models – Johari Window, Transactional Analysis, Myers Briggs Type Indicator, Self-Awareness and Self-Development Exercises (11 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Business Ethics – Text and Cases	C.S.V. Murthy	Himalaya Publishing House

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

General

Introduction, components of the environment, environmental degradation. (4 hours)

Ecology

Elements of ecology: Ecological balance and consequences of change, principles of environmental impact assessment. (4 hours)

Air pollution and control

Atmospheric composition, energy balance, climate, weather, dispersion, sources and effects of pollutants, primary and secondary pollutants, green house effect, depletion of ozone layer, standards and control measures. (6 hours)

PART B

Water pollution and control

Hydrosphere, natural water, pollutants their origin and effects, river/lake/ground water pollution, standards and control. (6 hours)

Land Pollution

Lithosphere, pollutants (municipal, industrial, commercial, agricultural, hazardous solid wastes): their origin and effects, collection and disposal of solid waste, recovery and conversion methods. (6 hours)

Noise Pollution

Sources, effects, standards and control. (6 hours)

RECOMMENDED BOOKS

Course Assessment Methods End Semester Assessment(University Exam) Continous Assessment (Sessional, Assignments, Quiz) Practical (Continuous and end semester evaluation)	50 50 50
Course Prerequisites	10+2
Course Objectives (CO)	To teach the fundamentals of basic chemical sciences essential for the development of new technologies to all branches of engineering.
Course Outcome	1) Thermodynamics will help the students learn different thermodynamic laws, heat changes and energy calculations. 2) Studying catalysis will be beneficial to understand the role and mechanism of various heterogeneous and homogeneous catalysts in increasing reactions rate of many synthetically important chemical reactions. 3) By studying corrosion, the students will learn about basic nature and reasons of corrosion, its impact in many sectors of our lives. 4) Studying spectroscopy will help to understand the basic principles of spectroscopy and its use to determine chemical structures. 5) By studying coordination chemistry and CFT, explanation about different properties of coordination compounds will be given.

SYLLABUS

Note for Examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having

three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Thermodynamics: Review of objectives and limitations of chemical thermodynamics, State functions, Thermodynamic equilibrium, work, heat, internal energy, enthalpy, heat capacity, Zeroth law of thermodynamics, First law of thermodynamics, Reversible, isothermal and adiabatic expansion & compression of an ideal gas. Irreversible isothermal and adiabatic expansion of an ideal gas. Carnot cycle and efficiency of reversible engines, Enthalpy change and its measurement. Flame temperature, Second and third law of thermodynamics. Concept of entropy. Gibb's and Helmholtz equations. Simple numerical for calculating w , q , ΔE , ΔH and entropy. (10 hours)

Catalysis: Catalysis and general characteristics of a catalytic reactions, homogeneous catalysis, kinetics of acid, base and enzyme catalysis – Michealis Menten equations. Heterogenous catalysis. Application of catalysis for industrially important processes– hydrogenation (Wilkinson's catalyst), hydroformylation, acetic acid process and Wacker process. (6 hours)

Electrochemistry: Introduction to electrochemistry, types of electrodes, Ion selective electrodes, Reference electrodes, Fuel cells (hydrogen-oxygen, propane-oxygen, methanol-oxygen fuel cells), Corrosion: Types of corrosion, dry and wet corrosion and their mechanisms, types of electrochemical corrosion (galvanic, pitting, waterline, differential aeration, soil, microbiological, inter-granular, stress corrosion), Factors influencing corrosion, Prevention of corrosion. (8 hours)

SECTION - B

Polymer chemistry: Classification of polymers, Mechanism and methods of polymerisation, idea of number average and weight average molecular masses of polymers, preparation, properties and uses of polystyrene, polyester, polyamide, phenol-formaldehyde, silicones and epoxy resins. (5hours)

Spectroscopy: UV- Introduction, Lambert-Beer's Law, selection rules, electronic transitions, Application to simple organic molecules (auxochrome, chromophore), effect of conjugation and solvent on transition of

organic molecules, Woodward-Fieser Rules for calculating λ_{\max} for dienes. IR- Introduction, Principle of IR spectroscopy-Fundamental vibrations, Application to simple organic molecules (effect of masses of atoms, bond strength, nature of substituent, hydrogen bonding on IR frequency), sample preparation for IR.

(10 hours)

Coordination chemistry: Introduction, Crystal Field Theory, Splitting of octahedral, tetrahedral and square planar complexes, crystal field stabilization energies of octahedral and tetrahedral complexes and its applications.

(6 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Organic Chemistry	Joseph M. Hornback Brooke	Cole Publishing Company U.S.A.
2.	Atkin's Physical Chemistry	Peter Atkins, Julio de Paula	7 th Edition, Oxford University Press.
3.	Concise Inorganic Chemistry	J D Lee	Vth Edition, Chapman & Hall, 2003
4.	A Textbook of Engineering Chemistry	Shashi Chawla	Dhanpat Rai & Co. Pvt. Ltd
5.	Introductory Polymer Chemistry	G.S.Mishra	John Wiley & Sons, New York, 1993.
6.	Principles of Physical Chemistry	Puri, Sharma and Pathania	W.H. Freeman & Co, 2008.
7.	Introduction to spectroscopy	D. S. Pavia, G.M. Lasmpman and G.S. Kriz	4 th Edition, Thomson learning, Indian Edition 208.
8	Basic Inorganic Chemistry	F.A. Cotton, G. Wilkinson and P.L. Gaus	3rd Ed., John Wiley & Sons.

List of Experiments

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly and has to perform any eight experiments.

1. Volumetric analysis: Iodometric titrations, complexometric titrations, Acid-base titrations
(conductometric), Precipitation titrations
2. Analysis of lubricants: Viscosity/surface tension/saponification value/acid value
3. Instrumental techniques for chemical analysis: Conductometry, potentiometry, UV-visible/IR spectrophotometer.
4. Preparation of few organic compounds/inorganic complexes/polymer.

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	A textbook of Quantitative Inorganic Analysis	A. I. Vogel	Longman Gp. Ltd, 4 th edition
2	Essentials of Experimental Engineering Chemistry	Shashi Chawla	Dhanpat Rai and Co. Delhi (2001)
3	Vogel's text book of quantitative chemical analysis	J. Mendham, R. C. Denny, J. D. Barnes and M. J. K. Thomas	Pearson Education

Course Code	HSS202/ HSS102
Course Title	Communication Skills
Type of Course	Core

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION - A

Fundamentals of Communication Skills

Scope and Significance of Communication Skills, Listening, Speaking, Reading and Writing (2 hours)

Writing Skills

Basics of Grammar – Word Order, Sentence Construction, Placing of Subject and Verbs, Parts of Speech, Use of Tenses, Articles, Prepositions, Phrasal Verbs, Active-Passive, Narration (4 hours)

Vocabulary Building and Writing

Word Formations, Synonyms, Antonyms, Homonyms, One-Word Substitutes, Idioms and Phrases, Abbreviations of Scientific and Technical Words. (3 hours)

Speaking Skills

Introduction to Phonetic Sounds, English Phonemes, Stress, Rhythm and Intonation, Countering Stage Fright and Barriers of Communication. (3 hours)

Reading and Comprehension

(2 hours)

Section – B

Advanced Communication Skills

Scope, Significance, Process of Communication in an organization, Types and Levels, Communication Networks, Technical Communication, Tools of Effective Communication. (2 hours)

Speaking Skills and Personality Development

Interpersonal Communication, Presentation Skills, Body Language and Voice Modulation, Persuasion, Negotiation and Linguistic Programming, Public Speaking, Group Discussions, Interviews and Case Studies, Power Point Presentations, Relevant to the context and locale, Technical Presentations, Conducting, Meeting and Conferences (5 hours)

Communication and Media

Social and Political Context of Communication, Recent Developments in Media (1 hour)

Advanced Techniques in Speaking Skills

Importance of Listening/Responding to native and global accents, Telephonic Interviews and Video Conferencing (2 hours)

Advanced Techniques in Technical Writing

Job Application, CV Writing, Business Letters, Memos, Minutes, Reports and Report Writing Strategies, E-mail Etiquette, Blog Writing, Instruction Manuals and Technical Proposals (4 hours)

Practical Sessions

1. Individual presentations with stress on delivery and content
2. Overcoming Stage Fright - Debates, extempore
3. How to discuss in a group - Group Discussion
4. Discussion on recent developments and current debates in the media
5. How to prepare for an Interview and face it with confidence
6. Conducting meeting and conferences
7. Exercises on Composition & Comprehension, Reading Improvement

TEXT BOOKS

Course Code	MATHS201
Course Title	Differential Equations and Transforms
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Course Prerequisites	Calculus(MATHS101)
Course Objectives (CO)	<ol style="list-style-type: none"> 1. To learn the methods to formulate and solve linear differential equations and their applications to engineering problems 2. To learn the concepts of Laplace transforms and to evaluate Laplace transforms and inverse Laplace transform 3. To apply Laplace transforms to solve ordinary differential equations 4. To learn the concept of Fourier series, integrals and transforms. 5. To learn how to solve heat, wave and Laplace equations.
Course Outcome	<ol style="list-style-type: none"> 1. The student will learn to solve Ordinary Differential equations. 2. The students will be able to apply the tools of Laplace Transforms to model engineering problems and solve the resulting differential equations. 3. Students will understand the nature and behavior of trigonometric (Fourier) series and apply it to solve boundary value problems.

SYLLABUS

Note for the examiner: The semester question paper will be of 50 Marks having 7 questions of equal marks. Students are required to attempt 5 questions in all. First question, covering the whole syllabus and having questions of conceptual nature, will be compulsory. Rest of the paper will be divided into two parts having three questions each and the candidate is required to attempt two questions from each section.

SECTION – A

Ordinary Differential Equations

Review of geometrical meaning of the differential equation, directional fields, exact differential equations (scope as in chapter 8, sections 8.1 – 8.10 of reference 2), solution of differential equations with constant coefficients; methods of differential operators (scope as in chapter 9, sections 9.1 – 9.5 of reference 2). Non-homogeneous equations of second order with constant coefficients: Solution by method of variation of parameters, reduction by order (scope as in chapter 9, section 9.7, 9.10 of reference 2). Power series method of solution (scope as in chapter 10, section 10.2 of reference 2) (13 hours)

Laplace Transforms

Laplace transform, Inverse transforms, shifting, transform of derivatives and integrals. Unit step function, second shifting theorem, Dirac's Delta function. Differentiation and integration of transforms. Convolution Theorem on Laplace Transforms. Application of Laplace transforms to solve ordinary differential equations with initial conditions (Scope as in Chapter 5, Sections 5.1 – 5.5 of Reference 1). (10 hours)

SECTION – B

Fourier Series and Transforms: Periodic functions, Fourier series, Even and odd series, half range expansions, Complex Fourier Series, Approximation by trigonometric polynomials. Fourier integrals, Fourier Cosine and Sine transforms, Fourier Transforms (Scope as in Chapter 10, Sections 10.1 – 10.5, 10.7 – 10.10 of Reference 1). (8 hours)

Partial Differential Equations: Partial differential equations of first order, origin, solution of linear partial differential equations of first order, Integral surfaces passing through a given curve (Scope as in Chapter 2, Sections 1, 2, 4, 5 of Reference 4). (6 hours)

Boundary Value Problems: D'Alembert's solution of wave equation, separation of variables: one dimension and two dimension heat and wave equation, Laplace equation in Cartesian and Polar coordinates (Scope as in Chapter 11, Sections 11.1, 11.3 – 11.5, 11.8 – 11.9 of Reference 1). (8 hours)

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Elements of Partial Differential Equations	Ian N. Sneedon	McGraw Hill, Singapore 1957.

Course Code	ME 203 / ME103
Course Title	Workshop Practice
Type of Course	Core
Course Assessment Methods Practical (Continuous and end semester evaluation)	50
Course Prerequisites	Basic Workshop Practices
Course Objectives (CO)	<p>Know different machines, tools and equipment, Identify different Engineering materials, metals and non-metals. Understand different Mechanisms, Use of Machines, Tools and Equipment.</p> <p>Knowledge of basic Manufacturing Processes in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops.</p>
Course Outcome	<p>Familiarity with common machines, Tools and Equipment in basic Workshop Practices.</p> <p>On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops in Engineering professions.</p> <p>Applications of Basic Workshop Practices..</p>

SYLLABUS

Instruction for Students: The candidate will be attending a laboratory session of three hours weekly.

Practice of basic exercises related with different shops. On hand basic workshop practices in Electronics, Electrical, Machine, Welding, Fitting, Sheet Metal. Smithy, Foundry and Carpentry Workshops in Engineering professions.

Welding Workshop :

(Theory)Joining Processes, Welding and its Classification, Welding Processes, Fusion Welding, Pressure Welding, Electric Arc Welding, Gas Welding, Resistance Welding, Metal Inert gas Welding, Welding Joints, Welding Positions, Welding defects, Welding Applications, Basic welding design and Procedures, identification of materials.

Jobs: Butt Joint in Flat Position using SMAW, Lap Joint using Spot Welding, Edge Joint in Horizontal Position using SMAW, Tee Joint in Flat position using SMAW, Corner Joint in vertical position using SMAW. Defect Identification and marking, Edge preparation and Fillet making, Tacking, Distortion identification.

Electronics Workshop

To know about Soldering mechanism and techniques, Familiarity with Electronic Components / symbols, Testing of electronic components, Application of Soldering : Circuit Assembly

List of Jobs :

Practice of Soldering and de-soldering, Identification and testing of a) passive electronic components b) Active electronic components, Assembly of Regulated Power supply circuit.

Electrical Workshop

Introduction of Various Electric wirings, Wiring Systems, Electrical wiring material and fitting, different type of cables, Conduit pipe and its fitting, inspection points, switches of all types, Distribution boards, M.C.B's etc., Electric Shock and its management.

Electric Tools: Conversance with various tools and to carry out the following:

1. Measurement of wire sizes using SWG and micrometer
2. Identification of Phase and neutral in single phase supply

Jobs:

To control a lamp with a single way switch

To control a lamp from two different places

To assemble a fluorescent lamp with its accessories

To control a lamp, fan and a three pin socket in parallel connection with single way switches

Fitting Shop

Introduction of Fitting, different type of operations, Tools, materials, precision instruments like Vernier caliper and Micrometer etc, Safety precautions and Practical demonstration of tools and equipments

Jobs:

To make a square from MS Flat, Punching, Cutting, Filling techniques and practice, Tapping, Counter Drilling.

Smithy Workshop

Introduction of Smithy and Forging process, Tools and Equipment's, Operations, Heat Treatment processes, Advantages, Dis-advantages, Defects and Safety precautions.

Jobs:

Drawing and Upsetting Practice using Open Hearth Furnace, Cold working process practice, Heat Treatment \: Annealing and hardening process

Machine Shop

Application, Function and different parts, Operations of Lathe, Type of Cutting Tools and their materials, Drill machine Types, applications and Functions. Hacksaw machines and functions, Work Holding devices and tools, chucks, Vices, machine Vices, V Block, Measuring Instruments uses, Shaper and Milling machine Applications.

Jobs:

To perform Marking, Facing, Turning, taper Turning, Grooving, Knurling, parting, Drilling, Reaming operations on lathe machine, Hacksawing practice on Power hacksaw, Shaping operation practice on Shaper.

Carpentry Shop

Classification of Tree, Timber. Advantages and uses of Timber, Seasoning of Wood, Tools Used, Defects and

Prevention of Wood.

Jobs:

Tee Joint, Cross Joint, Tenon Joint, L Shape Joint, Practice of Wood Working Lathe, Practice on multi-purpose Planer.

Foundry Shop

Introduction to Foundry, Advantages and Disadvantages of castings process, Introduction to pattern and various hand tools, Ingredients of Green sands, Various Hand Molding processes, Introduction to Casting Defects.

Jobs:

Identification and uses of hand tools, Preparation of Green sand in Muller, Preparation of Sand Mould of Single piece solid pattern, Split pattern, Preparation of Green sand Core, casting of a Mould and study its defects.

RECOMMENDED BOOKS			
S.No.	NAME	AUTHOR(S)	PUBLISHER
1.	Introduction to Basic Manufacturing Processes and Workshop Technology	Rajender Singh	New Age International Publication
2	Manufacturing Processes	Chapman	Viva Books Private Limited

Course Code	CIV 201
Course Title	Building Materials and Construction
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Course Prerequisites	
Course Objectives (CO)	To learn the various building materials and standardized laboratory techniques used to evaluate construction materials performance. To understand the various types of masonry works, causes and affects of dampness, various damp proofing methods, understand and utilize basic principles used in Building Construction .
Course Outcome	

SYLLABUS

Note: The examiner shall set 8 questions i. e 4 from each part and students shall be required to attempt a total of 5 questions with at least 2 questions from each part.

SECTION – A

BUILDING STONES

General, Qualities of a good building stone, Deterioration of stones, Preservation of stones, Common building stones of India & their Uses, Artificial stones.

BRICKS

General, Constituents of bricks, desirable and harmful ingredients in brick earth, qualities of good bricks, testing of bricks, strength, Absorption, weathering of bricks. Varieties of fire bricks, sand lime bricks, building tiles- roofing; flooring and wall tiles.

LIME

Cementing material, Characteristics of good quality lime, classification & testing of Lime, Hydraulic test, acid test, setting & slaking of lime, uses of different varieties of lime

TIMBER

Advantages of timber construction, timber trees- exogenous and endogenous trees; soft and hard woods,

structure of tree, felling of trees, defects in timber, characteristics of good timber, uses and testing of timber

CEMENT AND CONCRETE

Constituents of concrete, different types of cements used and their strengths, Ingredients and manufacture of cements. Hydration and compounds of hydration. Properties and various tests of cement

SECTION - B

BRICK & STONE MASONRY

Terms used; types of bonds; their merits and demerits; Rubble and ashlar joints in stone masonry, introduction to cement concrete hollow blocks

WALLS AND FOUNDATION

Load bearing and non-load bearing walls, estimation of load on walls and footings, Thickness considerations, partition and cavity walls .

DAMP PROOFING

Sources, Causes of dampness in buildings, bad effects of dampness, methods of damp proofing.

ARCHES AND LINTELS

Introduction to terms used in Arches; different types of arches; brick and stone arches, types and functions of lintels.

DOORS AND WINDOWS

Introduction terms used location of doors and windows, types of doors and windows, Ventilators

PLASTERING, POINTING AND PAINTING

Introduction, objects and types, special materials for plastered surfaces, distempering, white washing and color washing of plastered surfaces.

FLOORS

Introduction, various types of floors commonly used and their suitability for different buildings, anti- termite treatment.

RECOMMENDED BOOKS			
S.No.	NAME	AUTHORS	PUBLISHER
1.	Engineering Materials	S. K. Sharma & G. C. Mathur	R. Chand & Co. Delhi
2.	Engineering Materials	S. C. Rangwala	Charotar Publishing House, India
3.	Building Construction	S. K. Sharma	S. Chand
4.	Building Construction	Sushil Kumar	Standard Publishers
5.	Building Construction	B. C. Punmia	Laxmi Publishers

Course Code	CIV202
Course Title	Fluid Mechanics
Type of Course	Core
Course Assessment Methods	
End Semester Assessment(University Exam)	50
Continous Assessment (Sessional, Assignments, Quiz)	50
Course Prerequisites	
Course Objectives (CO)	The objective of this course is to introduce the students with various types of Fluids and their properties, concept of Fluid Statics, Fluid Dynamics, and Various types of Flows.
Course Outcome	

SYLLABUS

Note: The examiner shall set 8 questions i. e 4 from each part and students shall be required to attempt a total of 5 questions with at least 2 questions from each part.

SECTION - A

FLUID AND THEIR PROPERTIES

Concept of fluid, difference between solids, liquids and gases; ideal and real fluids; Continuum concept of fluid: density, specific weight and relative density; viscosity and its dependence on temperature; surface tension and capillarity, vapor pressure and cavitation: compressibility and bulk modulus; Newtonian and non-Newtonian fluids.

FLUID STATICS

Concept of pressure, Pascal's law and its engineering hydrostatic paradox. Action of fluid pressure on plane (horizontal, vertical and inclined) submerged surface, resultant force and center of pressure, force on a curved surface due to hydrostatic pressure.

Buoyancy and floatation, stability of floating and submerged bodies, Metacentric height and its determination.

FUNDAMENTALS OF FLUID FLOW

Types of fluid flow, Basic Principles of Fluid Flow, Continuity Equation, Acceleration of a Fluid Particle, Rotational and Irrorational Motions, Circulation and Vorticity, Velocity Potential, Stream Function, Streamlines, Equipotential Lines and Flow Net, Uses of Flow Net .

FLUID DYNAMICS

Forces acting on Fluid in motion, Euler's equation of motion, Bernoulli's equation, Impulse momentum equation, kinetic energy and momentum correction factors, flow along a curved streamline, free and forced vortex motions.

SECTION –B

LAMINAR FLOWS

Flow regimes and Reynolds number, critical velocity and critical Reynolds number, laminar flow in circular cross section pipes. Navier-stokes equations in Cartesian coordinates (no derivation), meaning of terms, flow between parallel plates, stokes law.

TURBULENT FLOWS

Turbulent flows, scale and intensity, Effects of turbulent flow in pipes and flow losses in pipes, Darcy equation, Minor head losses in pipe fittings.. Equation for velocity distribution in smooth and rough pipes (no derivation).

BOUNDARY LAYER ANALYSIS

Assumption and concept of boundary layer theory. Boundary-layer thickness, displacement, momentum & energy thickness, laminar and turbulent boundary layers on a flat plate; laminar sub-layer, smooth and rough boundaries. Local and average friction coefficients. Separation and Control.

DIMENSIONAL ANALYSIS AND SIMILITUDE

Fundamental and derived units and dimensions, dimensional homogeneity, Rayleigh's and Buckingham's Pi method for dimensional analysis, dimension less number and their significance, geometric, kinematic and dynamic similarity, model studies.
